Scouting Summary

COMMON THEMES

- Right Fast, averaging 138.6 kph (up to 143.9).
- Typical length is **7-8m** (their good length); median 7.1 m.
- Stock ball is **a good length down the leg side** (18% of deliveries).
- Goes round the wicket 47% of the time against left-handers.
- Across an over he **holds a fairly consistent length**, banging it in more as the over goes on.

BIGGEST THREATS

- Danger pitching line: **Stumps**.
- Takes 33% of wickets pitching **full on the 5th stump**.
- Beats the bat 7.0% of tracked balls (false-shot 18.4%).
- Gets you **caught behind** more than most — 100% of his wickets (1.5× the typical rate for this type).
- 83% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 4th, square leg: short leg.

AREAS TO EXPLOIT

- Concedes most runs pitching **back of a length down the leg side** (20% of runs).
- Short ball: 15% of deliveries, economy 4.2 — 2 wkts from 34 short balls.
- Most of his runs leak through the leg side (58%) — his main scoring release.

Solid line = career, ***dotted = last 3 years*** *(where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial).* ***Crease variation*** *= how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball.* ***Repeatability*** *= length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.*

Current Form (last 4 Tests · 2024-12-26 → 2025-11-14)

He's around his career level lately (avg 19 last 4 vs 19 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

AVG SWING
0.76°
in-air

How he gets you out	His %	Base	Index
Caught	100%	68%	**1.48×**

*Share of his 6 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, **<1** = less. Caught is high for everyone — the signal is the over-indexed row.*

Catches to: Keeper 3 · Slip: 4th 1 · Square leg: short leg 1 · Fine leg: leg slip 1

Angle & variations: Round the wicket to LHB (47%), stays over to RHB · slower balls 1.0% (~114 kph)

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
Full on the 5th stump
33% of mapped wickets (1 of 3)

RUNS — WHERE MOST CONCEDED
Back of a length down the leg side
20% of runs (14 of 69)

DANGER LINE
Stumps
3 wkts / 147 balls · 2.2% adj (2.0% raw) · low sample

Most wickets come from full on the 5th stump, while he leaks the most runs back of a length down the leg side.

*Zone shares are over his **mapped** wickets — 3 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.*

Match-ups (vs left-handers)

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Middle (4–7)	134	5	20.6	4.61	26.8	21%	7.25 m

Bangs it in more with the old ball (5%→22% short).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

59% of his runs come in boundaries — a boundary every 10 balls; most runs go to the leg side (58%); the drive hurts most (10 fours/sixes at 3.1 runs/ball).

BOUNDARY %
59%
runs in 4s/6s

ROTATED %
41%
runs in 1s & 2s

BALLS / BOUNDARY

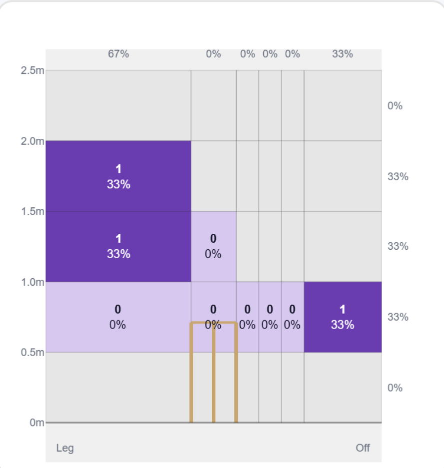
Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	34	57	39%	6	1.68
Drive	18	56	39%	10	3.11
Pull/Hook	9	16	11%	2	1.78
Cut	6	16	11%	3	2.67

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (68/68) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

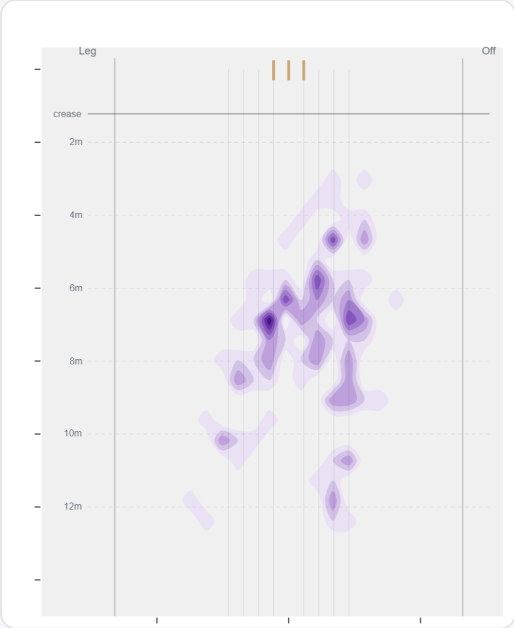


Wicket balls pass the stumps mostly at stumps.

Where They're Scored Off

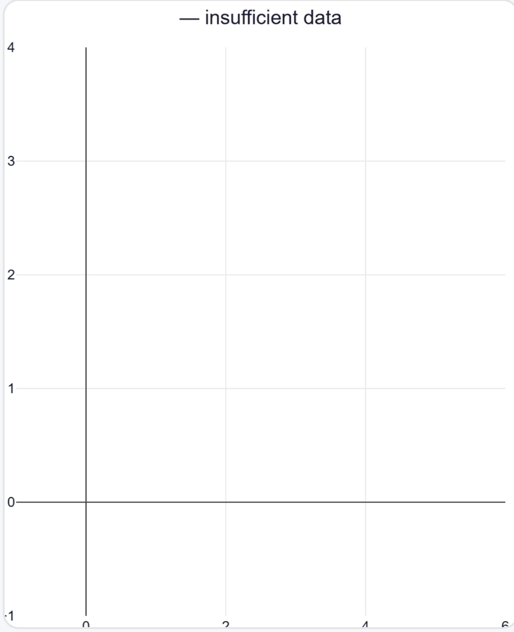
Runs come mostly on the leg side (64%).

Where They Pitch It



Pitches it a good length down the leg side most often (17%); rarely drops short (14%).

Where Wickets Come From

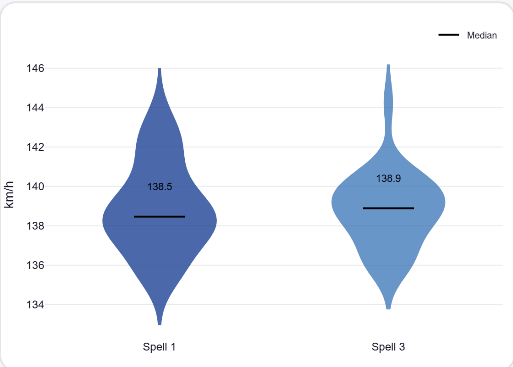


Wickets come mostly from balls pitched full on the 5th stump, but strikes most often pitching on the stumps.

Speed & Spells

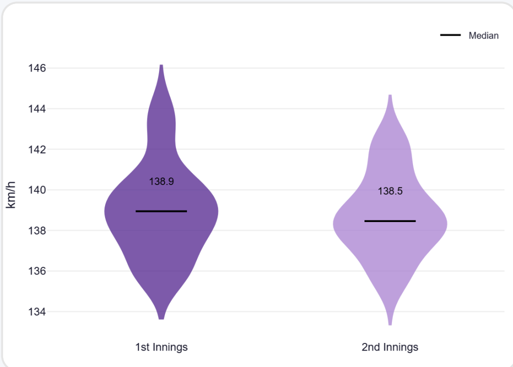
He holds his pace across spells, is a touch slower in the 2nd innings.

Speed by Spell



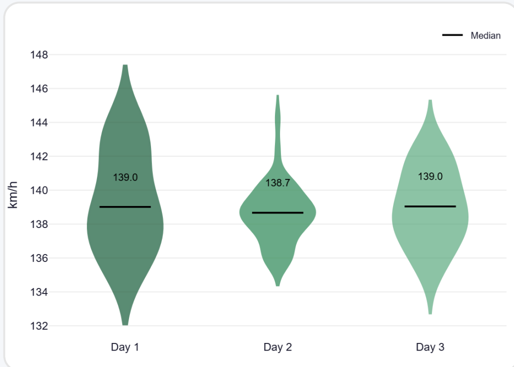
By spell — opening burst vs later spells.

Speed by Innings



1st vs 2nd innings of the match.

Speed by Day



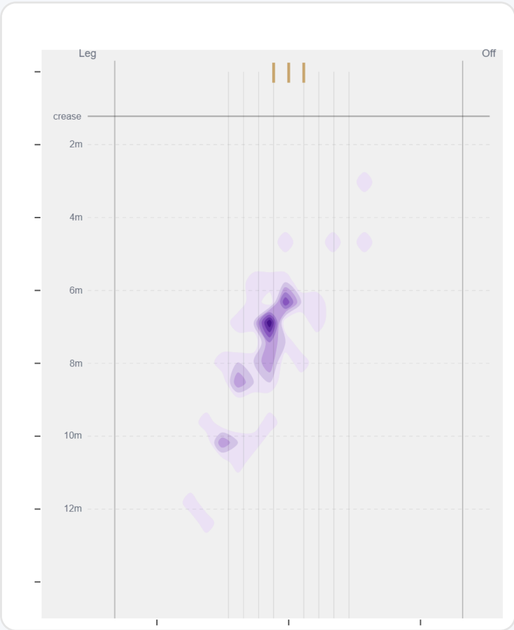
By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

His pitching line stays similar over and round the wicket — economy 3.85→4.00, a wicket every 30→54 balls (over→round).

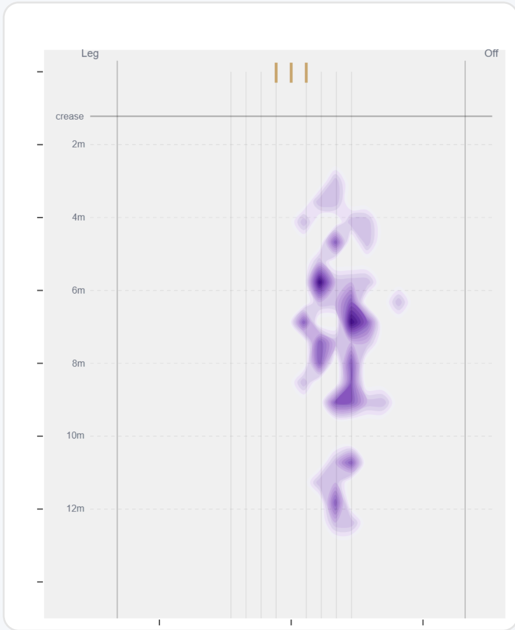
Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	120 (53%)	Stumps	7.2 m	12%	3.85	4	62%
Round	108 (47%)	Stumps	7.1 m	16%	4.00	2	56%

Over the Wicket



Where he pitches it from over the wicket (120 balls).

Round the Wicket



Where he pitches it from round the wicket (108 balls).

Sequencing & Over Construction

Moderately consistent with his length (length spread ±2.2 m); tends to bang it in later in the over (short 5%→9% by the 5th–6th ball).

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	6.3 m	2%	4.57	4.8%
Ball 2	7.2 m	7%	3.80	2.4%
Ball 3	7.2 m	3%	2.91	2.9%
Ball 4	6.9 m	6%	4.00	2.8%
Ball 5	7.0 m	5%	3.24	2.7%
Ball 6	7.8 m	12%	4.41	0.0%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases about 65 cm from the middle stump; varies his spot on the crease a lot (more than 100% of right-arm pace).

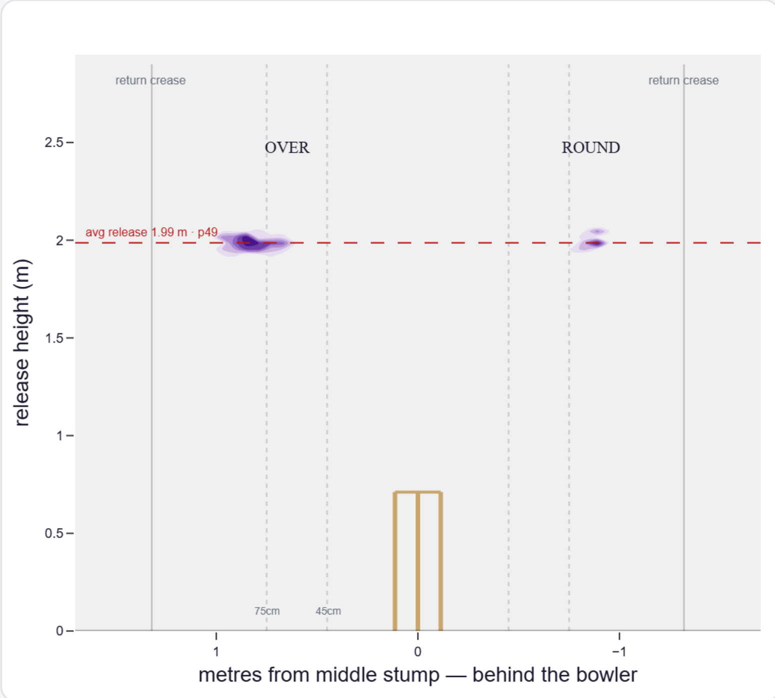
Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	19%	46	3.13	3	8.0	15
Wide (>75cm)	81%	192	4.31	3	46.0	64

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	77%	0%	23%	77%
Round the wicket	23%	0%	7%	93%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)



Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A moderate mover of the ball; skids through at a lower trajectory.

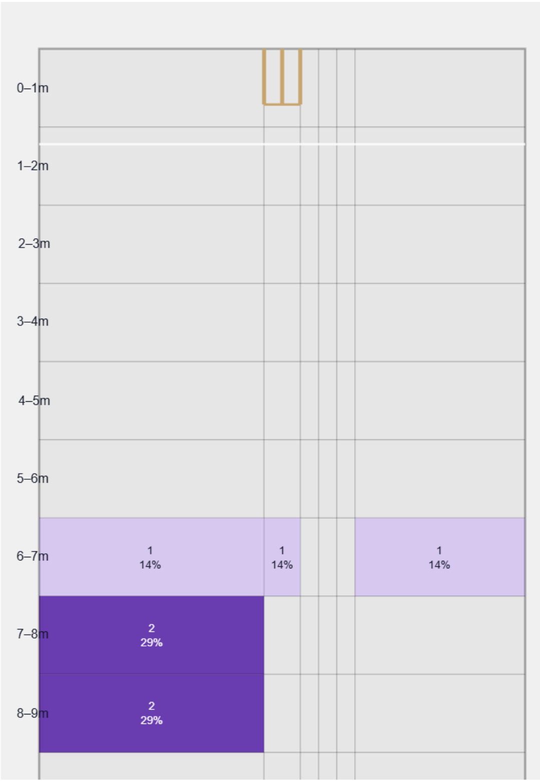
Generates about average seam and below avg swing for a pace bowler; seams it away more to left-hand batters (86%).

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.76°	38th pct (below avg)	60% away / 40% in
Seam	0.60°	59th pct (about average)	87% away / 13% in
Bounce	3.6°	11th pct (well below avg)	—

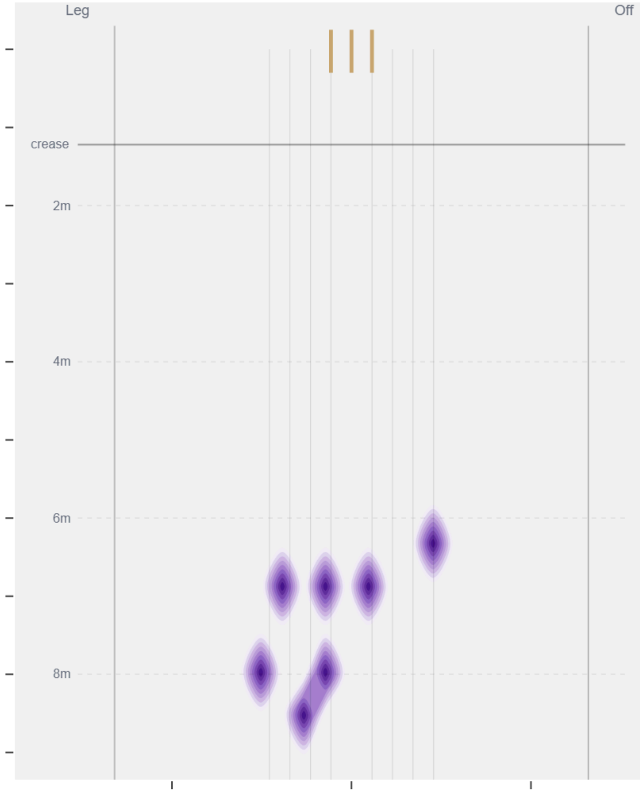
Beaten Zones (play-and-miss)

Beaten — Grid



Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap



The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Down leg** (71% of play-and-misses). Overall he beats the bat 7.0% of tracked balls (false-shot 18.4%, n=228).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
