Phase Profile (where they bowl & how they go there) ► wickets

Duan bowls most in the **powerplay** (67% of their overs) and goes at **3.00** at the death vs 2.00 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %	Avg speed
Powerplay	67%	10.0	2.0 P100	2 P87	10.0	30.0	2%	80%	—
Middle	27%	4.0	5.25 P51	2 P100	10.5	12.0	8%	71%	—
Death	7%	1.0	3.0 P100	1 P100	3.0	6.0	0%	83%	—

Blue P## = percentile vs modern-era ODI pace peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Off pace (slower balls)

Too few tracked balls to map (4 in total) — no over/round or pitch/stumps split shown.

*The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations. **These maps and the speed cards also include this bowler's T20I deliveries** — their ODI record alone is too thin to read. Where the ball lands and how fast it is bowled carry across white-ball formats; the economy, average, wicket and phase numbers on this page are ODI only.*
