Bowling Fingerprint (percentile vs ODI peers)

Changing (last 3 years vs career): repeatability up.

Solid line = career, dotted = last 3 years. Percentile within same-type ODI peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. **Crease variation** = how much they shift their release point sideways across the crease ball to ball (high = varies a lot, low = same spot every ball). **Repeatability** = length consistency over their stock-length band, so deliberate yorkers/bouncers don't count as poor control (high = tighter, more metronomic than peers). A marker at the very edge = beyond the typical peer range on that trait.

Phase Profile (where they bowl & how they go there) [▶ wickets](#)

Marco bowls most in the **powerplay** (47% of their overs) and goes at **8.11** at the death vs 5.63 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %	Avg speed
Powerplay	47%	126.0	5.63 P26	23 P81	30.8	32.9	14%	67%	136
Middle	38%	103.3	6.52 P7	14 P47	48.1	44.3	14%	51%	132
Death	15%	40.7	8.11 P35	15 P72	22.0	16.3	17%	39%	129

Blue P### = percentile vs modern-era ODI pace peers in that phase (two-new-balls era, 2011+; economy inverted so **higher = harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Length & Variation Deep-Dive (yorkers, bouncers & slower balls — how often, what line) [▶ slower balls](#)

How often, by phase — % of that phase's legal balls

Phase	Yorker / full	Bouncer / short	Slower ball	Slower yorker	Slower bouncer	Econ
Powerplay	3%	0%	1%	0.0%	0.0%	5.63
Middle	9%	2%	15%	0.5%	0.5%	6.52
Death	7%	4%	36%	0.4%	1.6%	8.11
Overall	6%	2%	12%	0.2%	0.4%	6.34

Yorker line [▶](#)

Wide (the hole) **9%**
Off / channel **8%**
At the stumps **72%**
Leg stump / straight **11%**
Full balls only (95), by pitch line.

Bouncer line [▶](#)

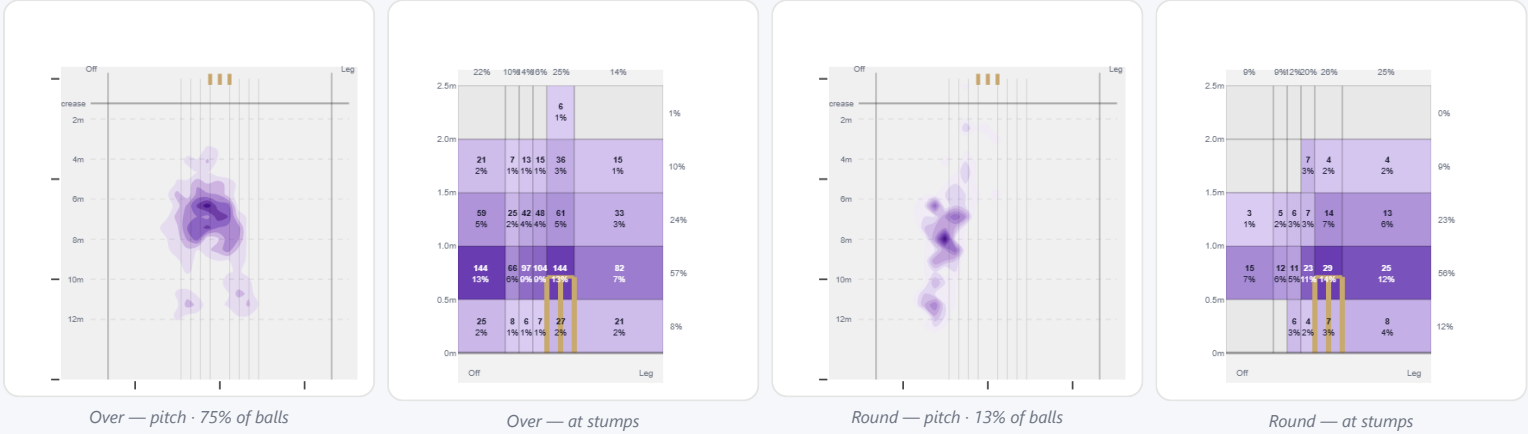

Wide (outside off) **44%**
At the body / head **44%**
Down the leg side **12%**
*Short balls only (25), line at the stumps. Slower-ball bouncers **0.4%** (7), mostly wide (outside off) [▶](#)*

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs LHB	634	0%	6.4	23	29.4	27.6	15%
· over the wkt	632		6.33	23	29.0	27.5	16%
vs RHB	986	28%	6.31	29	35.8	34.0	14%
· over the wkt	706		6.03	21	33.8	33.6	13%
· round the wkt	280		7.03	8	41.0	35.0	15%

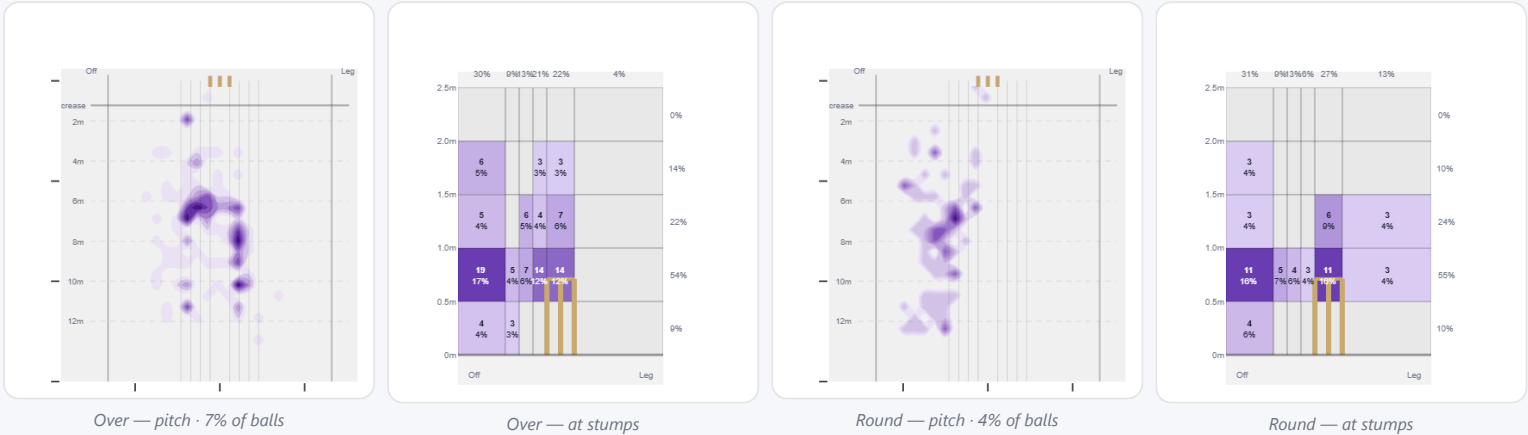

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Off pace (slower balls)

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations.

ODI internationals only. Ball-change eras in this sample: two new balls (2011-Jul25) 90%; two→one from ov35 (Jul25+) 10%. Phase = Powerplay 1–10 / Middle 11–40 / Death 41–50. Economy charges wides + no-balls to the bowler. odi-1.2 · 19 Sep 2026.
