Phase Profile (where they bowl & how they go there) ► wickets

Nqobani bowls most in the **middle** (100% of their overs).

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %	Avg speed
Middle	100%	12.0	3.83 P98	1 P14	46.0	72.0	7%	65%	—

Blue P## = percentile vs modern-era ODI pace peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Length & Variation Deep-Dive (yorkers, bouncers & slower balls — how often, what line)

How often, by phase — % of that phase's legal balls

Phase	Yorker / full	Bouncer / short	Slower ball	Slower yorker	Slower bouncer	Econ
Middle	6%	0%	1%	0.0%	0.0%	3.83
Overall	6%	0%	1%	0.0%	0.0%	3.83

Yorker line

Too few full balls to read (4).

Bouncer line

Too few bouncers to read (0).

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs RHB	59	0%	3.56	1	35.0	59.0	5%
· over the wkt	59		3.56	1	35.0	59.0	5%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Off pace (slower balls)

Too few tracked balls to map (20 in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations. **These maps and the speed cards also include this bowler's T20I deliveries** — their ODI record alone is too thin to read. Where the ball lands and how fast it is bowled carry across white-ball formats; the economy, average, wicket and phase numbers on this page are ODI only.
