Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Structurally, leg-spin turning the ball away from the RHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the left.

Field vs off spin

**Pure stock field.** Nothing in their game clears the deviation bar (cohort P75) against off spin, so the orthodox field stands — that *is* the read.

**Floating fielder:** They score only 2% of their runs where point stands — the spare run-saver to move as the game asks.

**Floating fielder:** Silly point sees few of their edges (0.2 vs 1.4 for the cordon) — float to backward point as needed.

**Pure stock field.** Nothing in their game clears the deviation bar (cohort P75) against off spin, so the orthodox field stands — that *is* the read.
