SUMMARY

- A high-class, steady batter — strong vs spin, tight technique.
- They get out most often to balls that are **back of a length and wide outside off** (5.1 dismissals/100).
- Most often out **caught in the field** (45% of dismissals); most often to right fast (15).

COMMON THEMES

- right-hand bat, averaging 40.5 at a strike rate of 87.4.
- Carries a big share of the batting — 14.2% of team runs.
- Scores mainly through the leg side (40%).

STRENGTHS

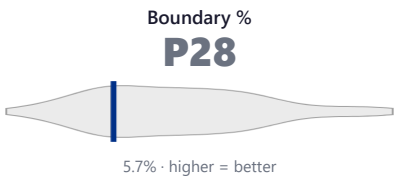

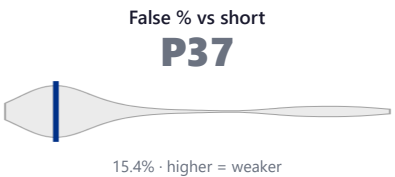

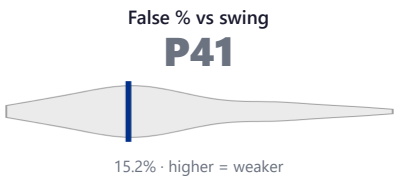

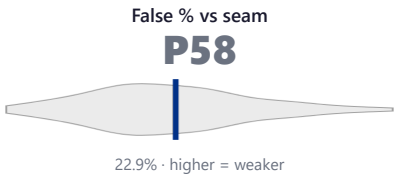

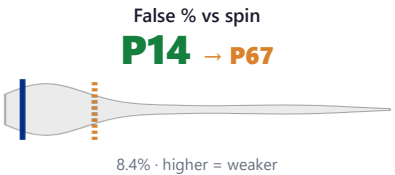

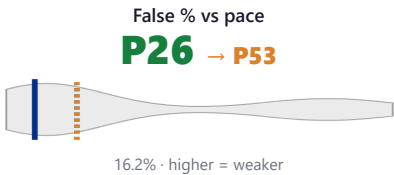

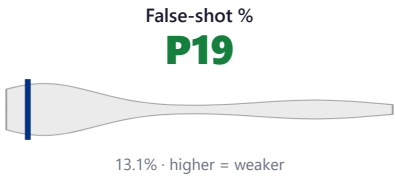

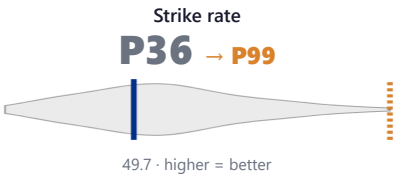

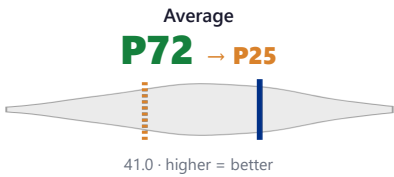

- Main scoring shot is the work/nudge (35% of runs).
- Scores unusually little off the **cut** (4% of runs vs 8% typically).
- Handles both similarly (pace 41, spin 40).
- Starts securely — their dismissal rate barely drops once set (2.2 early vs 2.1/100); early pressure alone won't buy their wicket. Early runs come mainly off the work/nudge (40%).

WEAKNESSES / HOW TO GET HIM

- Most often out **caught in the field** (45% of dismissals); most often to right fast (15).
- Vulnerable to the **back of a length** (averages 31 there vs 40 overall; 4.2 dismissals/100).
- The ball that seams in hurts them (avg 28 vs 44 when it holds its line).
- The ball that swings away hurts them (avg 24 vs 58 when it holds its line).
- Most dangerous ball: **back of a length and wide outside off** (5.1 dismissals/100, avg 25).
- His **slog** is high-risk (false shot 52%, 6.2 outs/100).

Batting Fingerprint (percentile vs Test batters)

A high-class, steady batter — strong vs spin, tight technique.
Changing (last 3 years vs career): strike rate up; false % vs spin up; average down.

Solid line = career, dotted = last 3 years (avg / SR / false% vs pace & spin). Percentile among Test batters (≥1500 balls). Red = a target (high vulnerability); green = a strength.

Match Impact (share of runs)

Makes **14.2%** of their team's runs over a career (typical innings 12.5%), and **7.3%** of all runs in their matches; carries the innings (≥25% of the team's runs)

16% of the time, and dominates ($\geq 40\%$) 5%.

Against Each Bowler Type

Handles both similarly (pace 41, spin 40).

Start of Innings vs Set

Starts securely — their dismissal rate barely drops once set (2.2 early vs 2.1/100); early pressure alone won't buy their wicket. Early runs come mainly off the work/nudge (40%).

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Mitch Starc	Left pace	23.7	85.8	59.5	good length, 4th-stump channel	Caught behind 23.4%	Med
Xavier Bartlett	Right pace	26.8	83.8	53.7	good length, 4th-stump channel	Caught behind 24.9%	High
Cooper Connolly	Left-arm orthodox	30.7	83.1	53.5	good length, outside off	LBW 19.8%	Med
Adam Zampa	Leg-spin	33.6	93.0	54.3	good length, outside off	LBW 22.1%	Med
Pat Cummins	Right pace	35.2	89.5	48.2	short, wide of off	Caught behind 26.1%	High

Structurally, left-arm orthodox turning the ball away from the RHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the left.

Field vs right-arm pace

Early — first 30 balls · 673 balls

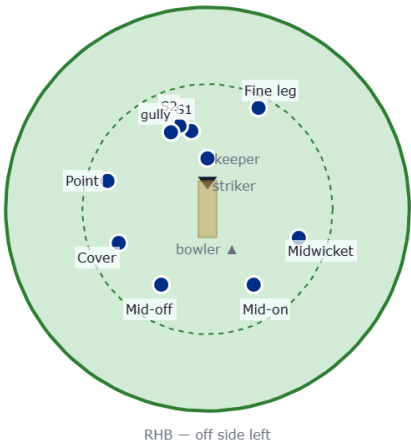

Fielder	Stock/Change	Why they're there
1st slip	Stock	Standard stock position.
2nd slip	Stock	Standard stock position.
3rd slip	Stock	Standard stock position.

Point	Stock	Standard stock position.
Cover	Stock	Standard stock position.
Mid-off	Stock	Standard stock position.
Mid-on	Stock	Standard stock position.
Fine leg	Stock	Standard stock position.

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against right-arm pace, so the orthodox field stands — that is the read.

Floating fielder: They score only 3% of their runs where mid-off stands — the spare run-saver to move as the game asks.

Bouncer plan

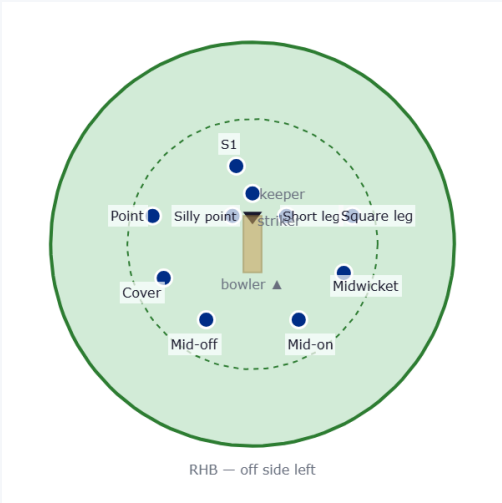

Fielder	Stock/Change	Why they're there
1st slip	Change	One slip kept for the top / outside edge.
Short leg	Change	Catcher in front of square for the fend or glove off the hip.
Gully	Change	The steer or fend that flies squarer of the wicket.
Point	Change	Ring saver for the bumper plan.
Cover	Change	Ring saver for the bumper plan.
Mid-off	Change	Ring saver for the bumper plan.
Mid-on	Change	Ring saver for the bumper plan.
Deep backward square	Change	Deep behind square for the top-edged pull.
Deep fine leg	Change	Deep behind square for the hook.

A standard bumper field — he isn't a heavy puller (P25), so this is a holding / surprise option, not a wicket-taking plan. One slip, a catcher in front of square, and the two legal leg-side riders (deep backward square + deep fine leg).

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against off spin, so the orthodox field stands — that is the read.

Floating fielder: They score only 2% of their runs where point stands — the spare run-saver to move as the game asks.

Floating fielder: Silly point sees few of their edges (0.1 vs 1.0 for the cordon) — float to backward point as needed.
