Scouting Summary

COMMON THEMES

- Off Spin, averaging 88.0 kph (up to 95.0).
- Typical length is **4-5m** (their good length); median 4.4 m.
- Stock ball is **full on the stumps, hitting the stumps** (37% of deliveries).
- Goes round the wicket 80% of the time against left-handers.
- **Round the wicket** he shifts his pitching line from down leg to stumps and brings his length back to 4.5 m.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Full** (9 wkts, 3.3% adjusted strike).
- Danger pitching line: **Stumps**.
- Takes 45% of wickets pitching **full on the stumps**.
- Beats the bat 1.1% of tracked balls (false-shot 27.1%).
- Gets you **stumped** more than most — 18% of his wickets (4.1× the typical rate for this type).
- 0% of catches are behind the wicket (keeper / slips / gully).

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (28% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (54%) — his main scoring release.
- Cash in when he goes **full down the leg side** (economy 3.6, beats the bat only 41%).

He's around his career level lately (avg 25 last 5 vs 28 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Caught	36%	59%	0.62×
LBW	27%	20%	1.37×
Bowled	18%	17%	1.08×
Stumped	18%	4%	4.10×

Share of his 11 wickets by type, indexed against the base rate vs the average spin bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Angle & variations: Uses round the wicket to both (LHB 80% · RHB 27%)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full on the stumps, hitting the stumps (37% of deliveries, economy 2.90). Minor variations: full down the leg side (14%) and a good length on the stumps (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	—	37%	2.90	5	25%
full down the leg side ▶	—	14%	3.60	2	41%
a good length on the stumps ▶	—	11%	3.00	1	26%
full outside off ▶	—	10%	2.00	2	30%
full in the channel ▶	—	7%	3.10	0	19%
a good length outside off ▶	—	5%	5.18	1	—

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

Old ball (31+ ov) · 292 balls · 8 wkts · econ 3.18

Top ball type	%	Econ	Wkts
full on the stumps	37%	3.14	5
full down the leg side	16%	3.13	0
full outside off	10%	2.36	1
a good length on the stumps	9%	2.77	1

Most lethal: **full Stumps** (4.0 wkts/100).
How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) [▶ watch danger balls](#)

9 wkts / 256 balls · 3.3% adj (3.5% raw)

MOST LETHAL ZONE (BY RATE)
Full / Stumps
5 wkts / 128 balls · 3.4% adj (3.9% raw)

Most threatening pitching full on the stumps (9 wkts, 3.3% strike). Most wickets come from full on the stumps, while he leaks the most runs full on the stumps.

OLD BALL (31+ OV)

full Stumps

most lethal cell · 4.0 wkts/100 · danger length full · 8 wkts off 292 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Old ball (31+ ov)	292	8	19.4	3.18	36.5	25%	4.32 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Structurally he takes the ball away from the LHB — harder work for Kellaway regardless of individual reads; a left/right pairing at the crease blunts it.

Scoring Profile (vs left-handers)

52% of his runs come in boundaries — a boundary every 15 balls; most runs go to the leg side (54%).

Work/Nudge	24	34	26%	1	1.42
Cut	8	21	16%	4	2.62

Direction from ball-tracking (all scoring shots); shot type recorded on 76% of scoring balls (84/111) — groups with <5 balls omitted.

Pitch Maps & Scoring

Ball position as it passes the stumps for wicket balls.

Runs come mostly on the leg side (65%).

Where They Pitch It

Pitches it full on the stumps most often (31%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the stumps, but strikes most often pitching on the stumps.

Speed & Spells

He is ~3.0 km/h quicker in later spells, is quicker in the 2nd innings, and is ~2.0 km/h quicker later in the match.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to stumps; and pitches 56 cm shorter — economy 3.82→3.13, a wicket every 40→36 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	80 (20%)	Down leg	3.9 m	0%	3.82	2	59%
Round	328 (80%)	Stumps	4.5 m	0%	3.13	9	50%

Over the Wicket

Where he pitches it from over the wicket (80 balls).

Round the Wicket

Where he pitches it from round the wicket (328 balls).

Sequencing & Over Construction

Consistent with his length (length spread ± 1.1 m); holds a steady length right through the over.

Across 14 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.4 m	0%	3.25	8.3%
Ball 2	4.2 m	0%	4.63	1.4%
Ball 3	4.6 m	0%	5.58	0.0%
Ball 4	4.3 m	0%	1.07	0.0%
Ball 5	4.5 m	0%	2.45	3.0%
Ball 6	4.5 m	0%	2.32	3.2%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

Releases from about 2.08 m; releases about 87 cm from the middle stump.

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	44%	44	5.45	0	—	—
Wide (>75cm)	52%	53	4.64	0	—	—

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Round the wicket	56%	0%	16%	84%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Beaten Zones (play-and-miss)

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
