Phase Profile (where they bowl & how they go there) [▶ wickets](#)

Arshad bowls most in the **powerplay** (50% of their overs) and goes at **3.60** at the death vs 6.11 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %	Avg speed
Powerplay	50%	9.0	6.11 P10	1 P29	55.0	54.0	19%	63%	—
Middle	17%	3.0	7.33 P0	0 P2	—	—	6%	33%	—
Death	33%	5.8	3.6 P100	3 P98	7.0	11.7	0%	46%	—

Blue P## = percentile vs modern-era ODI pace peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs RHB	78	47%	5.15	4	16.8	19.5	8%
· over the wkt	41		7.02	1	48.0	41.0	15%
· round the wkt	37		3.08	3	6.3	12.3	0%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Off pace (slower balls)

Too few tracked balls to map (26 in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations. **These maps and the speed cards also include this bowler's T20 deliveries** — their ODI record alone is too thin to read. Where the ball lands and how fast it is bowled carry across white-ball formats; the economy, average, wicket and phase numbers on this page are ODI only.
