Phase Profile (where they bowl & how they go there) [▶ wickets](#)

Yash bowls most in the **powerplay** (65% of their overs) and goes at **7.00** at the death vs 8.09 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %	Avg speed
Powerplay	65%	11.0	8.09 P0	4 P99	22.2	16.5	23%	53%	—
Middle	29%	5.0	5.2 P55	1 P86	26.0	30.0	10%	43%	—
Death	6%	1.0	7.0 P74	0 P1	—	—	17%	33%	—

Blue P## = percentile vs modern-era ODI pace peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations. **These maps and the speed cards also include this bowler's T20 deliveries** — their ODI record alone is too thin to read. Where the ball lands and how fast it is bowled carry across white-ball formats; the economy, average, wicket and phase numbers on this page are ODI only.
