Too few balls in this series to compare a plan.

Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other LHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Fergus O'Neill	Right pace	24.9	43.1	36.8	good length, 4th-stump channel	Caught behind 24.7%	Med
Liam Hatcher	Right pace	28.1	55.9	41.2	good length, 4th-stump channel	Caught behind 26.2%	Med
Brendan Doggett	Right pace	28.3	57.6	41.5	good length, 4th-stump channel	Caught behind 26.4%	Med
Liam Scott	Right pace	28.6	36.4	29.6	good length, 4th-stump channel	Caught behind 24.6%	Med
Corey Rocchiccioli	Off-spin	29.4	55.9	43.4	good length, outside off	LBW 20.4%	Med

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against left-arm orthodox, so the orthodox field stands — that is the read.

Floating fielder: They score only 0% of their runs where point stands — the spare run-saver to move as the game asks.

Floating fielder: Silly point sees few of their edges (0.0 vs 1.1 for the cordon) — float to backward point as needed.
