Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other LHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Fergus O'Neill	Right pace	24.9	42.3	37.5	good length, 4th-stump channel	Caught behind 25.5%	Med
Brendan Doggett	Right pace	27.3	57.5	42.0	full, 4th-stump channel	Caught behind 25.1%	Med
Liam Hatcher	Right pace	29.0	55.7	40.0	good length, 4th-stump channel	Caught behind 26.1%	Med
Liam Scott	Right pace	29.4	35.7	28.6	good length, 4th-stump channel	Caught behind 23.5%	Med
Jhye Richardson	Right pace	32.4	48.6	34.3	good length, at the stumps	Caught behind 25.4%	Med

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.
