Share of his 5 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off (22% of deliveries, economy 3.38). Minor variations: a good length outside off (14%) and a good length on the stumps (9%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %

full on the stumps ▶	—	9%	6.00	0	20%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

DANGER LINE

Wide of 6th
4 wkts / 122 balls · 2.5% adj (3.3% raw) · low sample

Most wickets come from full wide outside off, while he leaks the most runs a good length wide outside off.

Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length

Bangs it in more with the old ball (0%→17% short).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

54% of his runs come in boundaries — a boundary every 12 balls; the drive hurts most (19 fours/sixes at 2.9 runs/ball).

Pitches it a good length wide outside off most often (21%); mixes in the short ball (27%).

Where Wickets Come From

Wickets come mostly from balls pitched full wide outside off, but strikes most often pitching wide outside off.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to wide of 6th; and pitches 82 cm shorter — economy 3.39→3.94, a wicket every 61→102 balls (over→round).

Round the Wicket

Sequencing & Over Construction

Variable with his length (length spread ±2.3 m); with no consistent trend to his length across the over.

Across 13 dismissals, about 2 km/h quicker — that's the change that brings the wicket.

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
