Scouting Summary

COMMON THEMES

- Right Medium, averaging 131.6 kph (up to 138.8).
- Usually takes the new ball (opens in 67% of innings).
- Typical length is **7-8m** (their good length); median 7.2 m.
- Stock ball is a **good length outside off** (30% of deliveries).
- Goes round the wicket 0% of the time against right-handers.
- Across an over he **hammers a repeatable length**.

BIGGEST THREATS

- Most dangerous length is **Good Length** (11 wkts, 2.4% adjusted strike).
- Danger pitching line: **Stumps**.
- Takes 29% of wickets pitching a **good length on the 6th stump**.
- Beats the bat 0.0% of tracked balls (false-shot 26.0%).
- Gets you **LBW** more than most — 36% of his wickets (2.3× the typical rate for this type).
- 0% of catches are behind the wicket (keeper / slips / gully).
- The wicket ball is usually **fuller** than the one before (50%) — beware the ball that draws you forward.
- He tends to **straighten his line** for the wicket ball (45%).
- The wicket ball is ~4 km/h quicker than the ball before it — a change of pace sets it up.

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (16% of runs).
- Short ball: 29% of deliveries, economy 2.5 — 3 wkts from 182 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Cash in when he goes **full wide outside off** (economy 6.2, beats the bat only 13%).

Bowling Fingerprint

Release height
P79

2.07 m · vs right-arm pace

Crease width
P36 → P35

63 cm · vs right-arm pace

Crease variation
P5 → P4

±6 cm · vs right-arm pace

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). **Release/crease** vs hand × pace/spin; **movement/speed/repeatability** vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

Kamboj, Anshul · bowling scout

1 / 5

He's less penetrative of late (avg 27 in his last 5 Tests vs 22 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	684	11	27.5	2.65	62.2	25%	133	7.00 m
Career	1,260	25	22.4	2.67	50.4	24%	131	6.94 m

Threat Profile [▶ watch wickets](#)

BEATEN %

beaten + edges

How he gets you out	His %	Base	Index
Caught	43%	65%	0.66×
LBW	36%	15%	2.34×
Bowled	21%	19%	1.11×

Share of his 14 wickets by type, indexed against the base rate vs the average pace bowler to RHB (men's Tests). **Index >1** = he does it more than most, <**1** = less. Caught is high for everyone — the signal is the over-indexed row.

Angle & variations: Round the wicket to LHB (47%), stays over to RHB

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off (30% of deliveries, economy 2.22). Minor variations: a good length wide outside off (30%) and full wide outside off (8%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	—	30%	2.22	6	30%
a good length wide outside off ▶	—	30%	1.36	3	28%
full wide outside off ▶	—	8%	6.24	0	13%
full outside off ▶	—	7%	5.30	2	15%
a good length in the channel ▶	—	5%	1.64	0	36%
back of a length outside off ▶	—	5%	3.38	0	12%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 308 balls · 4 wkts · econ 2.45

Top ball type	%	Econ	Wkts
a good length outside off	35%	1.91	2
a good length wide outside off	25%	1.25	1
full wide outside off	8%	8.09	0
full outside off	7%	4.00	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 323 balls · 10 wkts · econ 2.79

Top ball type	%	Econ	Wkts
a good length wide outside off	34%	1.44	2
a good length outside off	26%	2.63	4
full wide outside off	8%	4.67	0
full outside off	7%	6.55	1

Danger Zones (vs right-handers) [▶ watch danger balls](#)

RUNS — WHERE MOST CONCEDED
Full wide outside off
16% of runs (46 of 287)

DANGER LINE
Stumps
3 wkts / 47 balls · 3.7% adj (6.4% raw) · low sample

DANGER LENGTH
Good Length
11 wkts / 444 balls · 2.4% adj (2.5% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 6th stump
4 wkts / 109 balls · 3.1% adj (3.7% raw) · low sample

Most threatening pitching a good length on the stumps (11 wkts, 2.4% strike). Most wickets come from a good length on the 6th stump, while he leaks the most runs full wide outside off.

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	300	4	30.2	2.42	75.0	24%	7.07 m
Old ball (31+ ov)	323	10	15.0	2.79	32.3	28%	7.41 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Batters who profile on top: Josh Philippe (RHB, exp avg 40.5).

Scoring Profile (vs right-handers)

48% of his runs come in boundaries — a boundary every 20 balls; the drive hurts most (10 fours/sixes at 2.1 runs/ball).

BOUNDARY %
48%
runs in 4s/6s

ROTATED %
52%
runs in 1s & 2s

BALLS / BOUNDARY
20

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	61	96	47%	6	1.57
Drive	33	69	34%	10	2.09
Pull/Hook	10	18	9%	2	1.80

Direction from ball-tracking (all scoring shots); shot type recorded on 99% of scoring balls (150/151) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it a good length wide outside off most often (29%); drops short often (28%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 6th stump, but strikes most often pitching on the stumps.

Speed & Spells

He is quicker in the 2nd innings.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (100%, 628 balls); the round the wicket sample (3 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	628 (100%)	Wide of 6th	7.2 m	3%	2.60	14	47%
Round	3 (0%)	Down leg	—	—	8.00	0	100%

Over the Wicket

Where he pitches it from over the wicket (628 balls).

Round the Wicket

Round the wicket — only 3 balls to right-handers, too few to read into.

Sequencing & Over Construction

Metronomic — hammers the same length repeatedly, little to feast on (length spread ± 1.6 m); holds a steady length right through the over.

Across 22 dismissals, the wicket ball lands about 75 cm fuller than the ball before it and about 4 km/h quicker — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.2 m	0%	2.60	1.0%
Ball 2	7.3 m	4%	2.29	3.8%
Ball 3	7.2 m	6%	2.88	2.9%
Ball 4	7.2 m	2%	4.38	2.9%
Ball 5	7.2 m	5%	1.71	2.8%
Ball 6	6.8 m	2%	1.94	0.0%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
