Scouting Summary

COMMON THEMES

- Right Medium, averaging 123.5 kph (up to 129.8).
- Usually takes the new ball (opens in 67% of innings).
- Typical length is **0-1m** (their good length); median 5.8 m.
- Stock ball is **full wide outside off** (31% of deliveries).
- Goes round the wicket 0% of the time against right-handers.
- Across an over he **varies his length a lot**.

BIGGEST THREATS

- Most dangerous length is **Full** (3 wkts, 2.6% adjusted strike).
- Danger pitching line: **Wide of 6th**.
- Takes 33% of wickets pitching **full wide outside off**.
- Beats the bat 0.0% of tracked balls (false-shot 20.3%).
- Gets you **bowled** more than most — 75% of his wickets (3.9× the typical rate for this type).
- 0% of catches are behind the wicket (keeper / slips / gully).

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length on the 6th stump** (18% of runs).
- Short ball: 7% of deliveries, economy 2.4 — 0 wkts from 28 short balls.
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.

Threat Profile [▶ watch wickets](#)

BEATEN %

n=202

FALSE-SHOT %
20.3%
beaten + edges

How he gets you out	His %	Base	Index
Bowled	75%	19%	3.89×

Angle & variations: Round the wicket to LHB (64%), stays over to RHB

Share of his 8 wickets by type, indexed against the base rate vs the average pace bowler to RHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — **full wide outside off** (31% of deliveries, economy 1.29). Minor variations: a good length outside off (20%) and a good length wide outside off (17%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full wide outside off 	—	31%	1.29	3	—
a good length outside off 	—	20%	2.88	2	22%
a good length wide outside off 	—	17%	1.10	0	21%
a good length in the channel 	—	7%	2.88	0	22%
full on the stumps 	—	7%	5.50	0	17%
full in the channel 	—	6%	5.73	1	14%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 198 balls · 3 wkts · econ 2.79

Top ball type	%	Econ	Wkts
full wide outside off	26%	1.59	0
a good length outside off	24%	2.27	1
a good length wide outside off	13%	1.50	0
a good length in the channel	10%	1.67	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 187 balls · 5 wkts · econ 2.34

Top ball type	%	Econ	Wkts
full wide outside off	36%	1.05	3
a good length wide outside off	20%	0.83	0
a good length outside off	16%	3.86	1
full on the stumps	7%	4.15	0

Danger Zones (vs right-handers)

WICKETS — WHERE MOST COME FROM

Full wide outside off

33% of mapped wickets (2 of 6)

RUNS — WHERE MOST CONCEDED

A good length on the 6th stump

18% of runs (25 of 142)

DANGER LINE

Wide of 6th

5 wkts / 202 balls · 2.4% adj (2.5% raw)

DANGER LENGTH

Full

3 wkts / 85 balls · 2.6% adj (3.5% raw) · low sample

Most threatening pitching full wide outside off (3 wkts, 2.6% strike). Most wickets come from full wide outside off, while he leaks the most runs a good length on the 6th stump.

Zone shares are over his **mapped** wickets — 2 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	192	3	28.7	2.69	64.0	19%	6.27 m
Old ball (31+ ov)	187	5	14.6	2.34	37.4	21%	5.47 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

56% of his runs come in boundaries — a boundary every 18 balls; runs come mostly by working him around (67% of runs).

BOUNDARY %
56%
runs in 4s/6s

ROTATED %
44%
runs in 1s & 2s

BALLS / BOUNDARY
18

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	53	97	67%	12	1.83
Drive	19	39	27%	5	2.05

Direction from ball-tracking (all scoring shots); shot type recorded on 98% of scoring balls (82/84) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

Where They're Scored Off

Where They Pitch It

Where Wickets Come From

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Bowls exclusively over the wicket to right-handers (384 balls) — never goes round the wicket in this data.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	384 (100%)	Wide of 6th	5.8 m	2%	2.58	8	56%
Round	0 (0%)	—	—	—	—	0	—

Over the Wicket

Where he pitches it from over the wicket (384 balls).

Round the Wicket

Round the wicket — only 0 balls to right-handers, too few to read into.

Sequencing & Over Construction

Variable with his length (length spread ± 3.1 m); with no consistent trend to his length across the over.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	6.5 m	0%	3.39	1.4%
Ball 2	5.4 m	3%	2.00	1.5%
Ball 3	5.5 m	0%	2.49	3.1%
Ball 4	6.6 m	5%	2.71	1.6%
Ball 5	6.3 m	0%	2.03	3.2%
Ball 6	6.3 m	2%	2.75	1.6%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
