Scouting Summary

COMMON THEMES

- Right Medium, averaging 135.2 kph (up to 140.0).
- Usually takes the new ball (opens in 50% of innings).
- Typical length is **0-1m** (their good length); median 5.8 m.
- Stock ball is **full wide outside off** (34% of deliveries).
- Goes round the wicket 6% of the time against right-handers.
- Across an over he **varies his length a lot**.

BIGGEST THREATS

- Most dangerous length is **Good Length** (4 wkts, 2.1% adjusted strike).
- Takes 33% of wickets pitching **a good length wide outside off**.
- Beats the bat 0.0% of tracked balls (false-shot 12.3%).
- Gets you **bowled** more than most — 33% of his wickets (1.7× the typical rate for this type).
- 0% of catches are behind the wicket (keeper / slips / gully).

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (26% of runs).
- Short ball: 15% of deliveries, economy 2.6 — 1 wkts from 64 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.

Threat Profile [▶ watch wickets](#)

BEATEN %

0.0%

n=212

FALSE-SHOT %

12.3%

beaten + edges

How he gets you out	His %	Base	Index
Caught	50%	65%	0.77×
Bowled	33%	19%	1.73×

Share of his 6 wickets by type, indexed against the base rate vs the average pace bowler to RHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Angle & variations: Round the wicket to LHB (72%), stays over to RHB

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — full wide outside off (34% of deliveries, economy 2.25). Minor variations: a good length wide outside off (18%) and a good length outside off (15%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full wide outside off ▶	—	34%	2.25	0	0%
a good length wide outside off ▶	—	18%	1.97	2	15%
a good length outside off ▶	—	15%	1.55	0	10%
a good length in the channel ▶	—	6%	1.30	1	25%
full on the stumps ▶	—	5%	4.42	1	21%
full in the channel ▶	—	4%	4.24	0	6%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 199 balls · 2 wkts · econ 2.35

Top ball type	%	Econ	Wkts
full wide outside off	43%	2.02	0
a good length wide outside off	19%	1.50	1
a good length outside off	16%	2.40	0
full in the channel	5%	5.33	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 229 balls · 4 wkts · econ 2.91

Top ball type	%	Econ	Wkts
full wide outside off	26%	2.57	0
a good length wide outside off	17%	2.43	1
a good length outside off	13%	0.64	0
a good length in the channel	7%	1.50	1

Danger Zones (vs right-handers)

WICKETS — WHERE MOST CAME FROM

A good length wide outside off

33% of mapped wickets (2 of 6)

DANGER LENGTH

Good Length

4 wkts / 167 balls · 2.1% adj (2.4% raw) · low sample

RUNS — WHERE MOST CONCEDED

Full wide outside off

26% of runs (42 of 163)

Most wickets come from a good length wide outside off, while he leaks the most runs full wide outside off.

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	193	2	38.5	2.39	96.5	14%	5.36 m
Old ball (31+ ov)	229	4	27.8	2.91	57.2	11%	6.55 m

Bangs it in more with the old ball (2%→7% short).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

40% of his runs come in boundaries — a boundary every 23 balls; the drive hurts most (8 fours/sixes at 2.2 runs/ball).

BOUNDARY %
40%
runs in 4s/6s

ROTATED %
60%
runs in 1s & 2s

BALLS / BOUNDARY
23

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	64	82	51%	4	1.28
Drive	26	56	35%	8	2.15
Pull/Hook	6	15	9%	3	2.50

Direction from ball-tracking (all scoring shots); shot type recorded on 93% of scoring balls (111/119) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full wide outside off most often (28%); rarely drops short (14%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off.

Speed & Spells

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (94%, 402 balls); the round the wicket sample (24 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	402 (94%)	Wide of 6th	6.0 m	4%	2.69	5	42%
Round	24 (6%)	Down leg	5.5 m	17%	2.00	1	0%

Over the Wicket

Where he pitches it from over the wicket (402 balls).

Round the Wicket

Round the wicket — only 24 balls to right-handers, too few to read into.

Sequencing & Over Construction

Variable with his length (length spread ± 3.5 m); with no consistent trend to his length across the over.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	5.7 m	3%	2.29	0.0%
Ball 2	6.8 m	5%	2.92	0.0%
Ball 3	4.9 m	5%	2.47	1.4%
Ball 4	6.4 m	4%	2.40	2.9%
Ball 5	5.6 m	4%	2.96	3.0%
Ball 6	6.3 m	6%	2.91	1.5%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
