Scouting Summary

COMMON THEMES

- Off Spin, averaging 87.8 kph (up to 97.7).
- Typical length is **4-5m** (their good length); median 4.7 m.
- Stock ball is **full outside off, passing outside off** (19% of deliveries).
- Goes round the wicket 28% of the time against right-handers.
- **Round the wicket** he shifts his pitching line from wide of 6th to stumps.
- Across an over he **repeats his length ball after ball**.

BIGGEST THREATS

- Most dangerous length is **Good Length** (6 wkts, 3.1% adjusted strike).
- Danger pitching line: **Wide of 6th**.
- Takes 33% of wickets pitching a **good length wide outside off**.
- Beats the bat 1.4% of tracked balls (false-shot 22.3%).
- Gets you **bowled** more than most — 33% of his wickets (2.0× the typical rate for this type).
- 0% of catches are behind the wicket (keeper / slips / gully).

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (19% of runs).
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (42%) — his main scoring release.
- Cash in when he goes **good length wide outside off** (economy 6.4, beats the bat only 47%).

He's around his career level lately (avg 25 last 5 vs 28 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

in-air

How he gets you out	His %	Base	Index
Caught	56%	58%	0.96×
Bowled	33%	17%	1.96×

Share of his 9 wickets by type, indexed against the base rate vs the average spin bowler to RHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Angle & variations: Uses round the wicket to both (LHB 80% · RHB 27%)

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — full outside off, passing outside off (19% of deliveries, economy 4.30). Minor variations: full wide outside off (16%) and full in the channel (13%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full outside off ▶	—	19%	4.30	0	24%
full wide outside off ▶	—	16%	5.50	1	34%
full in the channel ▶	—	13%	3.44	1	18%
full on the stumps ▶	—	13%	5.49	1	8%
a good length on the stumps ▶	—	11%	3.67	1	22%
a good length outside off ▶	—	10%	2.59	2	32%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 166 balls · 4 wkts · econ 4.05

Top ball type	%	Econ	Wkts
full outside off	23%	5.05	0
full wide outside off	16%	3.00	0
a good length wide outside off	13%	5.71	3
full in the channel	13%	1.71	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 300 balls · 5 wkts · econ 4.64

Top ball type	%	Econ	Wkts
full outside off	17%	3.72	0
full wide outside off	15%	6.91	1
full on the stumps	15%	5.73	1
full in the channel	13%	4.35	0

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST COME FROM
A good length wide outside off
33% of mapped wickets (3 of 9)

RUNS — WHERE MOST CONCEDED
Full wide outside off
19% of runs (66 of 342)

DANGER LINE
Wide of 6th
4 wkts / 117 balls · 2.8% adj (3.4% raw) · low sample

DANGER LENGTH
Good Length
6 wkts / 167 balls · 3.1% adj (3.6% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / Wide of 6th
3 wkts / 42 balls · 3.7% adj (7.1% raw) · low sample

Most threatening pitching a good length wide outside off (6 wkts, 3.1% strike). Most wickets come from a good length wide outside off, while he leaks the most runs full wide outside off.

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	160	4	27.2	4.09	40.0	31%	4.67 m
Old ball (31+ ov)	300	5	46.4	4.64	60.0	18%	4.71 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Middle (4–7)	122	1	109.0	5.36	122.0	41%	4.91 m

Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Structurally he takes the ball away from the LHB — harder work for Kellaway regardless of individual reads; a left/right pairing at the crease blunts it.

Scoring Profile (vs right-handers)

57% of his runs come in boundaries — a boundary every 11 balls; most runs go to the off side (42%); the drive hurts most (13 fours/sixes at 2.2 runs/ball).

BOUNDARY %

Work/Nudge	48	66	24%	2	1.38
Cut	8	22	8%	4	2.75

Direction from ball-tracking (all scoring shots); shot type recorded on 83% of scoring balls (138/167) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around wide of 6th and moves it back.

Runs come mostly on the off side (51%).

Where They Pitch It

Pitches it full wide outside off most often (15%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching wide outside off.

Speed & Spells

He is ~3.0 km/h quicker in later spells, is quicker in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Round the wicket his pitching line moves from wide of 6th to stumps — economy 4.05→5.45, a wicket every 56→43 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	335 (72%)	Wide of 6th	4.6 m	0%	4.05	6	53%
Round	130 (28%)	Stumps	4.8 m	0%	5.45	3	64%

Over the Wicket

Where he pitches it from over the wicket (335 balls).

Round the Wicket

Where he pitches it from round the wicket (130 balls).

Sequencing & Over Construction

Relentlessly consistent — repeats his length ball after ball (length spread ± 0.9 m); holds a steady length right through the over.

Across 14 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.7 m	0%	4.54	0.0%
Ball 2	4.8 m	0%	5.45	2.6%
Ball 3	4.7 m	0%	5.20	1.3%
Ball 4	4.6 m	0%	3.54	1.3%
Ball 5	4.8 m	0%	4.12	5.0%
Ball 6	4.7 m	0%	3.88	1.2%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

Releases from about 2.08 m; releases about 87 cm from the middle stump.

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	44%	44	5.45	0	—	—
Wide (>75cm)	52%	53	4.64	0	—	—

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Round the wicket	56%	0%	16%	84%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Beaten Zones (play-and-miss)

Beats the bat most at **Good Length / Wide of 6th** (50% of play-and-misses). Overall he beats the bat 1.4% of tracked balls (false-shot 22.3%, n=291).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
