Scouting Summary

COMMON THEMES

- Right Medium, averaging 132.7 kph (up to 140.0).
- Often takes the new ball (opens in 40% of innings).
- Typical length is **7-8m** (their good length); median 7.2 m.
- Stock ball is **a good length outside off** (22% of deliveries).
- Goes round the wicket 5% of the time against right-handers.
- Across an over he **varies his length a lot**, banging it in more as the over goes on.

BIGGEST THREATS

- Most dangerous length is **Good Length** (7 wkts, 4.0% adjusted strike).
- Danger pitching line: **5th stump**.
- Takes 45% of wickets pitching **a good length wide outside off**.
- Beats the bat 0.0% of tracked balls (false-shot 26.9%).
- Gets you **bowled** more than most — 27% of his wickets (1.4× the typical rate for this type).
- 0% of catches are behind the wicket (keeper / slips / gully).

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (23% of runs).
- Short ball: 31% of deliveries, economy 4.2 — 4 wkts from 101 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Cash in when he goes **full outside off** (economy 4.6, beats the bat only 28%).

He's around his career level lately (avg 25 last 5 vs 25 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	654	16	25.3	3.72	40.9	25%	132	7.13 m
Career	654	16	25.3	3.72	40.9	25%	132	7.13 m

Threat Profile [▶ watch wickets](#)

BEATEN %
0.0%
n=242

FALSE-SHOT %
26.9%
beaten + edges

How he gets you out	His %	Base	Index
Caught	55%	65%	0.84×
Bowled	27%	19%	1.41×
LBW	18%	15%	1.19×

Share of his 11 wickets by type, indexed against the base rate vs the average pace bowler to RHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Angle & variations: Round the wicket to LHB (62%), stays over to RHB

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off (22% of deliveries, economy 2.23). Minor variations: a good length wide outside off (21%) and full outside off (10%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	—	22%	2.23	2	26%
a good length wide outside off ▶	—	21%	4.27	5	22%
full outside off ▶	—	10%	4.65	1	28%
full wide outside off ▶	—	7%	5.14	0	—
full on the stumps ▶	—	7%	2.29	1	42%
back of a length outside off ▶	—	6%	3.16	0	25%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 138 balls · 3 wkts · econ 3.61

Top ball type	%	Econ	Wkts
a good length outside off	20%	1.07	1
a good length wide outside off	20%	5.11	0
full on the stumps	9%	3.69	1
full outside off	9%	6.00	1

Old ball (31+ ov) · 187 balls · 8 wkts · econ 3.72

Top ball type	%	Econ	Wkts
a good length outside off	23%	3.00	1
a good length wide outside off	21%	3.69	5
full outside off	10%	3.79	0
full wide outside off	7%	5.54	0

Most lethal: **good length Wide of 6th** (7.1 wkts/100).

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs right-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length wide outside off

RUNS — WHERE MOST CONCEDED
A good length wide outside off
23% of runs (47 of 205)

DANGER LINE
5th stump
3 wkts / 51 balls · 4.3% adj (5.9% raw) · low sample

DANGER LENGTH
Good Length
7 wkts / 162 balls · 4.0% adj (4.3% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / Wide of 6th
5 wkts / 66 balls · 5.3% adj (7.6% raw)

Most threatening pitching a good length on the 5th stump (7 wkts, 4.0% strike). Most wickets come from a good length wide outside off, while he leaks the most runs a good length wide outside off.

Danger by ball age

NEW BALL (≤30 OV)

—

· 3 wkts off 138 balls

OLD BALL (31+ OV)

good length Wide of 6th

most lethal cell · 7.1 wkts/100 · danger length good length · 8 wkts off 187 balls

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	136	3	26.3	3.49	45.3	32%	7.04 m
Old ball (31+ ov)	187	8	14.5	3.72	23.4	23%	7.33 m

Bangs it in more with the old ball (0%→12% short).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

50% of his runs come in boundaries — a boundary every 14 balls; the drive hurts most (11 fours/sixes at 2.4 runs/ball).

BOUNDARY %
50%
runs in 4s/6s

ROTATED %
50%
runs in 1s & 2s

BALLS / BOUNDARY
14

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	32	78	45%	11	2.44
Work/Nudge	31	47	27%	3	1.52
Pull/Hook	17	40	23%	6	2.35

Direction from ball-tracking (all scoring shots); shot type recorded on 98% of scoring balls (94/96) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it a good length wide outside off most often (20%); drops short often (31%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching on the 5th stump.

Speed & Spells

He is quicker in the 2nd innings.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively over the wicket to right-handers (94%, 306 balls); the round the wicket sample (16 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	306 (94%)	Wide of 6th	7.1 m	7%	3.67	9	51%
Round	16 (5%)	Down leg	—	—	3.75	2	40%

Over the Wicket

Where he pitches it from over the wicket (306 balls).

Round the Wicket

Round the wicket — only 16 balls to right-handers, too few to read into.

Sequencing & Over Construction

Variable with his length (length spread ± 2.3 m); tends to bang it in later in the over (short 5% $\rightarrow$ 10% by the 5th–6th ball).

Across 13 dismissals, about 2 km/h quicker — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.6 m	2%	4.71	2.0%
Ball 2	7.1 m	8%	3.67	4.1%
Ball 3	7.6 m	8%	2.26	5.7%
Ball 4	6.9 m	5%	3.86	1.7%
Ball 5	6.8 m	10%	4.34	1.7%
Ball 6	7.2 m	9%	3.16	5.5%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
