SUMMARY

- They get out most often to balls that are **good length and wide outside off** (3.2 dismissals/100).
- Most often out **caught** (62% of dismissals); most often to right medium (4).

COMMON THEMES

- left-hand bat, averaging 90.6 at a strike rate of 98.4.

- Vulnerable to the **full** (averages 60 there vs 91 overall; 1.8 dismissals/100).
- Struggles **in the channel** (22 avg, 2.3 outs/100).
- Most dangerous ball: **good length and wide outside off** (3.2 dismissals/100, avg 26).

v England · 1 Test · 103 balls · 65 runs · avg 65.0

Too few balls in this series to compare a plan.

Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other LHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Fergus O'Neill	Right pace	24.9	43.1	36.8	good length, 4th-stump channel	Caught behind 24.7%	Med
Liam Hatcher	Right pace	28.1	55.9	41.2	good length, 4th-stump channel	Caught behind 26.2%	Med
Brendan Doggett	Right pace	28.3	57.6	41.5	good length, 4th-stump channel	Caught behind 26.4%	Med
Liam Scott	Right pace	28.6	36.4	29.6	good length, 4th-stump channel	Caught behind 24.6%	Med
Corey Rocchiccioli	Off-spin	29.4	55.9	43.4	good length, outside off	LBW 20.4%	Med

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodox line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.

Third man	Stock	Standard stock position.

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against right-arm pace, so the orthodox field stands — that is the read.

Bouncer plan

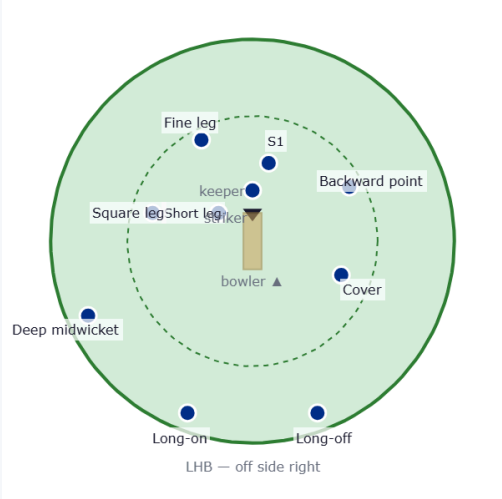

Fielder	Stock/Change	Why they're there
1st slip	Change	One slip kept for the top / outside edge.
Short leg	Change	Catcher in front of square for the fend or glove off the hip.
Gully	Change	The steer or fend that flies squarer of the wicket.
Point	Change	Ring saver for the bumper plan.
Cover	Change	Ring saver for the bumper plan.
Mid-off	Change	Ring saver for the bumper plan.
Mid-on	Change	Ring saver for the bumper plan.
Deep backward square	Change	Deep behind square for the top-edged pull.
Deep fine leg	Change	Deep behind square for the hook.

A standard bumper field — he isn't a heavy puller, so this is a holding / surprise option, not a wicket-taking plan. One slip, a catcher in front of square, and the

two legal leg-side riders (deep backward square + deep fine leg).
