Phase Profile (where they bowl & how they go there) [▶ wickets](#)

Gurjapneet bowls most in the **middle** (55% of their overs) and goes at **5.00** at the death vs 10.67 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %	Avg speed
Powerplay	27%	3.0	10.67 P0	0 P5	—	—	39%	44%	—
Middle	55%	6.0	6.17 P11	1 P73	37.0	36.0	11%	44%	125
Death	18%	2.0	5.0 P100	1 P98	10.0	12.0	0%	33%	119

Blue P## = percentile vs modern-era ODI pace peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

Off pace (slower balls)

Over — pitch · 14% of balls

Over — at stumps

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations. **These maps and the speed cards also include this bowler's T20 deliveries** — their ODI record alone is too thin to read. Where the ball lands and how fast it is bowled carry across white-ball formats; the economy, average, wicket and phase numbers on this page are ODI only.
