Phase Profile (where they bowl & how they go there) ► wickets

Nishant bowls most in the **middle** (81% of their overs).

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %
Powerplay	19%	7.0	6.0 P2	3 P100	14.0	14.0	14%	60%
Middle	81%	30.0	7.13 P0	8 P99	26.8	22.5	16%	43%

Blue P## = percentile vs modern-era ODI spin peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs LHB	69	23%	6.61	3	25.3	23.0	13%
· over the wkt	53		5.77	3	17.0	17.7	9%
vs RHB	153	100%	7.06	8	22.5	19.1	17%
· round the wkt	153		7.06	8	22.5	19.1	17%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

Off pace (slower balls)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations.

ODI internationals only. Ball-change eras in this sample: two→one from ov35 (Jul25+) 100%. Phase = Powerplay 1–10 / Middle 11–40 / Death 41–50. Economy charges wides + no-balls to the bowler. odi-1.2 · 04 Sep 2026.
