Phase Profile (where they bowl & how they go there) ► wickets

Vipraj bowls most in the **middle** (84% of their overs) and concedes **6.56** at the death.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %
Middle	84%	37.8	5.89 P12	4 P39	55.8	56.8	10%	45%
Death	16%	7.2	6.56 P31	3 P98	15.7	14.3	14%	47%

Blue **P##** = percentile vs modern-era ODI spin peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Match-ups (each hand, split over vs round the wicket)

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

Off pace (slower balls)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations. **These maps and the speed cards also include this bowler's T20 deliveries** — their ODI record alone is too thin to read. Where the ball lands and how fast it is bowled carry across white-ball formats; the economy, average, wicket and phase numbers on this page are ODI only.
