v Afghanistan · 2 Tests · 30 balls · 7 runs · avg 2.3

Too few balls in this series to compare a plan.

Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other LHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Xavier Bartlett	Right pace	19.3	75.0	61.9	good length, 4th-stump channel	Caught behind 26.6%	Low
Josh Hazlewood	Right pace	23.9	71.5	53.8	good length, 4th-stump channel	Caught behind 26.9%	Low
Nathan Ellis	Right pace	29.7	81.7	49.5	short, 4th-stump channel	Caught behind 27.4%	Low
Mitch Marsh	Right pace	30.4	86.1	51.9	good length, 4th-stump channel	Caught behind 25.4%	Low
Cameron Green	Right pace	31.5	88.0	51.6	good length, 4th-stump channel	Caught behind 28.1%	Low

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodox line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against right-arm pace, so the orthodox field stands — that is the read.

Floating fielder: They score only 3% of their runs where mid-off stands — the spare run-saver to move as the game asks.

Pure off-side / square stock field — Scores square and through the off (62% vs 25% leg) — an extra fielder square on the off, one leg-sider out..

Nothing in their game clears the deviation bar (cohort P75) against right-arm pace, so the orthodox field stands — that is the read.

Floating fielder: They score only 0% of their runs where mid-on stands — the spare run-saver to move as the game asks.

Bouncer plan

A standard bumper field — he isn't a heavy puller, so this is a holding / surprise option, not a wicket-taking plan. One slip, a catcher in front of square, and the two legal leg-side riders (deep backward square + deep fine leg).

Field vs off spin

Early — first 30 balls · 182 balls

Pure stock field. Nothing in their game clears the deviation bar (cohort P75) against off spin, so the orthodox field stands — that is the read.

Floating fielder: They score only 1% of their runs where mid-on stands — the spare run-saver to move as the game asks.

Floating fielder: Silly point sees few of their edges (0.1 vs 2.3 for the cordon) — float to backward point as needed.
