## SUMMARY

- A solid, steady batter — vulnerable to seam.
- Noticeably weaker against spin (averages 27 vs 72 against pace; false shot 25% vs 35%) — attack them with spin.
- They get out most often to balls that are **back of a length and outside off** (6.9 dismissals/100).
- Most often out **caught in the field** (43% of dismissals); most often to off spin (6).

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Structurally, off-spin turning the ball away from the LHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodox line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the right.

Bouncer plan

A standard bumper field — he isn't a heavy puller (P17), so this is a holding / surprise option, not a wicket-taking plan. One slip, a catcher in front of square, and the two legal leg-side riders (deep backward square + deep fine leg).

Field vs off spin

Early — first 30 balls · 123 balls

**Pure stock field.** Nothing in their game clears the deviation bar (cohort P75) against off spin, so the orthodox field stands — that is the read.

**Floating fielder:** They score only 3% of their runs where backward point stands — the spare run-saver to move as the game asks.

**Floating fielder:** Silly point sees few of their edges (0.2 vs 5.4 for the cordon) — float to backward point as needed.
