Bowling Fingerprint (percentile vs ODI peers)

Solid line = career, **dotted** = last 3 years. Percentile within same-type **ODI** peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. **Crease variation** = how much they shift their release point sideways across the crease ball to ball (high = varies a lot, low = same spot every ball). **Repeatability** = length consistency over their stock-length band, so deliberate yorkers/bouncers don't count as poor control (high = tighter, more metronomic than peers). A marker at the very edge = beyond the typical peer range on that trait.

Phase Profile (where they bowl & how they go there)

Graeme bowls most in the **middle** (91% of their overs) and goes at **5.13** at the death vs 1.33 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %
Powerplay	1%	3.0	1.33 P100	0 P2	—	—	0%	83%
Middle	91%	184.2	4.55 P75	28 P74	29.9	39.5	7%	56%
Death	7%	15.0	5.13 P94	3 P33	25.7	30.0	9%	53%

Blue **P###** = percentile vs modern-era ODI spin peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs LHB	432	1%	4.94	5	71.2	86.4	9%
· over the wkt	429		4.98	5	71.2	85.8	9%
vs RHB	781	0%	4.33	26	21.7	30.0	7%
· over the wkt	781		4.33	26	21.7	30.0	7%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

Off pace (slower balls)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations. **These maps and the speed cards also include this bowler's T20I deliveries** — their ODI record alone is too thin to read. Where the ball lands and how fast it is bowled carry across white-ball formats; the economy, average, wicket and phase numbers on this page are ODI only.
