Scouting Summary

COMMON THEMES

- Right Medium, averaging 129.5 kph (up to 138.0).
- Usually takes the new ball (opens in 67% of innings).
- Typical length is **6-7m** (their good length); median 6.6 m.
- Stock ball is a **good length wide outside off** (19% of deliveries).
- Goes round the wicket 47% of the time against left-handers.
- Round the wicket** he shifts his pitching line from down leg to wide of 6th.
- Across an over he **hammers a repeatable length**.

BIGGEST THREATS

- Most dangerous length is **Full** (7 wkts, 2.9% adjusted strike).
- Danger pitching line: **5th stump**.
- Takes 27% of wickets pitching a **good length wide outside off**.
- Beats the bat 0.0% of tracked balls (false-shot 22.0%).
- Wickets come mostly **caught behind** (73%).
- 0% of catches are behind the wicket (keeper / slips / gully).
- The wicket ball is usually **fuller** than the one before (50%) — beware the ball that draws you forward.
- He tends to **straighten his line** for the wicket ball (45%).
- The wicket ball is ~4 km/h quicker than the ball before it — a change of pace sets it up.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (14% of runs).
- Short ball: 18% of deliveries, economy 3.0 — 1 wkts from 111 short balls.
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Cash in when he goes **full outside off** (economy 3.6, beats the bat only 23%).

Bowling Fingerprint

Release height

P79

2.07 m · vs right-arm pace

Crease width

P36 → P35

63 cm · vs right-arm pace

Crease variation

P5 → P4

±6 cm · vs right-arm pace

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's less penetrative of late (avg 27 in his last 5 Tests vs 22 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	684	11	27.5	2.65	62.2	25%	133	7.00 m
Career	1,260	25	22.4	2.67	50.4	24%	131	6.94 m

Threat Profile [▶ watch wickets](#)

BEATEN %

FALSE-SHOT %
22.0%
beaten + edges

How he gets you out	His %	Base	Index
Caught	73%	68%	1.08×
Bowled	18%	18%	1.02×

Share of his 11 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Angle & variations: Round the wicket to LHB (47%), stays over to RHB

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off (19% of deliveries, economy 2.17). Minor variations: a good length outside off (15%) and a good length down the leg side (11%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	—	19%	2.17	3	25%
a good length outside off ▶	—	15%	1.62	1	23%
a good length down the leg side ▶	—	11%	2.65	0	13%
full outside off ▶	—	10%	3.64	4	23%
full on the stumps ▶	—	9%	3.31	0	19%
a good length on the stumps ▶	—	9%	2.11	0	26%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 286 balls · 5 wkts · econ 2.66

Top ball type	%	Econ	Wkts
full on the stumps	14%	3.75	0
a good length outside off	14%	2.25	1
a good length down the leg side	13%	2.05	0
a good length on the stumps	13%	1.46	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 343 balls · 6 wkts · econ 2.76

Top ball type	%	Econ	Wkts
a good length wide outside off	25%	2.12	2
a good length outside off	16%	1.18	0
full outside off	12%	3.95	3
full wide outside off	9%	4.26	1

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST COME FROM

27% of mapped wickets (3 of 11)

RUNS — WHERE MOST CONCEDED

A good length wide outside off

14% of runs (44 of 305)

DANGER LINE

5th stump

3 wkts / 85 balls · 2.6% adj (3.5% raw) · low sample

DANGER LENGTH

Full

7 wkts / 207 balls · 2.9% adj (3.4% raw)

MOST LETHAL ZONE (BY RATE)

Good Length / Wide of 6th

3 wkts / 120 balls · 2.2% adj (2.5% raw) · low sample

Most threatening pitching full on the 5th stump (7 wkts, 2.9% strike). Most wickets come from a good length wide outside off, while he leaks the most runs a good length wide outside off.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	276	5	24.4	2.65	55.2	23%	6.51 m
Old ball (31+ ov)	343	6	26.3	2.76	57.2	21%	6.79 m

Bangs it in more with the old ball (0%→5% short).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Vs Our Squad (simulated matchups)

From the match simulation — each pairing played out thousands of times from full Test profiles. Only the matchups that sit clearly away from this bowler's norm are listed; everyone unlisted profiles as roughly average against him. The full grid for every pairing is on the series Match-ups page.

Batters who profile on top: Josh Philippe (RHB, exp avg 40.5).

Scoring Profile (vs left-handers)

51% of his runs come in boundaries — a boundary every 17 balls; the drive hurts most (17 fours/sixes at 2.3 runs/ball).

BOUNDARY %
51%

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	61	106	44%	11	1.74
Drive	44	103	43%	17	2.34
Pull/Hook	9	17	7%	2	1.89
Cut	6	16	7%	3	2.67

Direction from ball-tracking (all scoring shots); shot type recorded on 99% of scoring balls (151/152) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it a good length wide outside off most often (18%); mixes in the short ball (17%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length wide outside off, but strikes most often pitching on the 5th stump.

Speed & Spells

He is quicker in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to wide of 6th — economy 2.78→2.65, a wicket every 66→50 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	332 (53%)	Down leg	6.6 m	4%	2.78	5	47%
Round	297 (47%)	Wide of 6th	6.7 m	3%	2.65	6	56%

Over the Wicket

Where he pitches it from over the wicket (332 balls).

Round the Wicket

Where he pitches it from round the wicket (297 balls).

Sequencing & Over Construction

Metronomic — hammers the same length repeatedly, little to feast on (length spread ± 1.8 m); holds a steady length right through the over.

Across 22 dismissals, the wicket ball lands about 75 cm fuller than the ball before it and about 4 km/h quicker — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	6.7 m	1%	2.77	1.9%
Ball 2	6.6 m	2%	3.49	1.9%
Ball 3	6.7 m	8%	1.64	0.0%
Ball 4	6.5 m	6%	2.32	1.9%
Ball 5	6.7 m	5%	2.79	0.0%
Ball 6	6.4 m	2%	3.31	4.8%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
