Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 82.6 kph (up to 93.3).
- Typical length is **4-5m** (their good length); median 4.2 m.
- Stock ball is **full on the stumps** (40% of deliveries).
- Goes round the wicket 73% of the time against left-handers.
- **Round the wicket** he shifts his pitching line from wide of 6th to stumps and pitches fuller, up to 4.1 m.
- Across an over he **holds a fairly consistent length**.

BIGGEST THREATS

- Most dangerous length is **Full** (4 wkts, 1.7% adjusted strike).
- Takes 50% of wickets pitching **full on the stumps**.
- Beats the bat 0.0% of tracked balls (false-shot 11.9%).
- Gets you **caught behind** more than most — 75% of his wickets (1.3× the typical rate for this type).
- 0% of catches are behind the wicket (keeper / slips / gully).

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (24% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Cash in when he goes **full outside off** (economy 7.4, beats the bat only 17%).

He's around his career level lately (avg 38 last 4 vs 38 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Caught	75%	59%	1.28×

Share of his 4 wickets by type, indexed against the base rate vs the average spin bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Angle & variations: Uses round the wicket to both (LHB 73% · RHB 96%)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full on the stumps (40% of deliveries, economy 2.69). Minor variations: full outside off (14%) and a good length on the stumps (9%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	—	40%	2.69	2	8%
full outside off ▶	—	14%	7.40	0	17%
a good length on the stumps ▶	—	9%	3.72	0	18%
full down the leg side ▶	—	8%	3.69	1	12%
full in the channel ▶	—	8%	4.32	0	8%
full wide outside off ▶	—	6%	9.67	1	12%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

Old ball (31+ ov) · 205 balls · 4 wkts · econ 4.42

Top ball type	%	Econ	Wkts
full on the stumps	30%	2.90	2
full outside off	15%	7.20	0
a good length on the stumps	11%	2.73	0
full down the leg side	10%	3.60	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM

Full on the stumps

50% of mapped wickets (2 of 4)

DANGER LENGTH

Full

4 wkts / 221 balls · 1.7% adj (1.8% raw) · low sample

RUNS — WHERE MOST CONCEDED

Full on the stumps

24% of runs (54 of 228)

Most wickets come from full on the stumps, while he leaks the most runs full on the stumps.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Old ball (31+ ov)	205	4	37.8	4.42	51.2	14%	4.57 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

52% of his runs come in boundaries — a boundary every 12 balls; the drive hurts most (11 fours/sixes at 2.1 runs/ball).

BOUNDARY %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	35	74	35%	11	2.11
Work/Nudge	54	59	28%	0	1.09
Sweep	12	34	16%	6	2.83
Slog	5	26	12%	5	5.20
Pull/Hook	6	12	6%	2	2.00

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (126/126) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full on the stumps most often (38%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the stumps.

Speed & Spells

He is quicker in the 2nd innings.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from wide of 6th to stumps; and pitches 49 cm fuller — economy 5.09→4.03, a wicket every 86→78 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	86 (27%)	Wide of 6th	4.6 m	0%	5.09	1	55%
Round	234 (73%)	Stumps	4.1 m	0%	4.03	3	51%

Over the Wicket

Where he pitches it from over the wicket (86 balls).

Round the Wicket

Where he pitches it from round the wicket (234 balls).

Sequencing & Over Construction

Consistent with his length (length spread ± 1.1 m); holds a steady length right through the over.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.2 m	0%	3.74	1.6%
Ball 2	4.3 m	0%	4.33	0.0%
Ball 3	3.8 m	0%	3.48	2.0%
Ball 4	4.4 m	0%	6.24	2.0%
Ball 5	4.1 m	0%	3.74	1.9%
Ball 6	4.0 m	0%	4.53	0.0%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
