Scouting Summary

COMMON THEMES

- Off Spin, averaging 84.2 kph (up to 98.1).
- Typical length is **3-4m** (their good length); median 3.5 m.
- Stock ball is **full on the stumps** (30% of deliveries).
- Goes round the wicket 97% of the time against left-handers.

BIGGEST THREATS

- Beats the bat 0.0% of tracked balls (false-shot 6.2%).

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the 5th stump** (13% of runs).
- Cash in when he goes **full outside off** (economy 3.9, beats the bat only 9%).

Angle & variations: Uses round the wicket to both (LHB 96% · RHB 29%)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full on the stumps (30% of deliveries, economy 1.18). Minor variations: full outside off (24%) and full wide outside off (18%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	—	30%	1.18	0	4%
full outside off ▶	—	24%	3.90	0	9%
full wide outside off ▶	—	18%	1.60	0	—
full in the channel ▶	—	12%	3.14	0	5%
full down the leg side ▶	—	6%	7.20	0	—
a good length on the stumps ▶	—	4%	6.00	0	—

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

Old ball (31+ ov) · 155 balls · 0 wkts · econ 3.48

Top ball type	%	Econ	Wkts
full on the stumps	30%	1.30	0
full outside off	22%	4.36	0
full wide outside off	19%	1.66	0
full in the channel	13%	3.30	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

RUNS — WHERE MOST CONCEDED

Full on the 5th stump

13% of runs (12 of 89)

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Old ball (31+ ov)	155	0	—	3.48	—	5%	3.42 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

54% of his runs come in boundaries — a boundary every 14 balls.

BOUNDARY %
54%
runs in 4s/6s

ROTATED %
46%
runs in 1s & 2s

BALLS / BOUNDARY
14

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	15	34	37%	5	2.27
Work/Nudge	13	23	25%	2	1.77
Sweep	7	14	15%	2	2.00
Cut	6	6	7%	0	1.00

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (50/50) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full on the stumps most often (22%); rarely drops short (0%).

Where Wickets Come From

Pitch location of wicket-taking balls.

Speed & Spells

He and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively round the wicket to left-handers (97%, 167 balls); the over the wicket sample (6 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	6 (3%)	Down leg	—	—	5.00	0	80%
Round	167 (97%)	Stumps	3.5 m	0%	3.31	0	52%

Over the Wicket

Over the wicket — only 6 balls to left-handers, too few to read into.

Round the Wicket

Where he pitches it from round the wicket (167 balls).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
