Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 82.8 kph (up to 90.0).
- Typical length is **3-4m** (their good length); median 4.1 m.
- Stock ball is **full on the stumps** (38% of deliveries).
- Goes round the wicket 97% of the time against right-handers.
- Across an over he **repeats his length ball after ball**.

BIGGEST THREATS

- Most dangerous length is **Full** (5 wkts, 1.5% adjusted strike).
- Danger pitching line: **Stumps**.
- Takes 25% of wickets pitching **full on the stumps**.
- Beats the bat 0.0% of tracked balls (false-shot 17.2%).
- Gets you **bowled** more than most — 25% of his wickets (1.5× the typical rate for this type).
- 0% of catches are behind the wicket (keeper / slips / gully).

AREAS TO EXPLOIT

- Concedes most runs pitching **full on the stumps** (26% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Cash in when he goes **good length outside off** (economy 3.6, beats the bat only 7%).

He's around his career level lately (avg 38 last 4 vs 38 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

AVG DRIFT
—
in-air

How he gets you out	His %	Base	Index
Caught	62%	58%	1.08×
Bowled	25%	17%	1.47×

Share of his 8 wickets by type, indexed against the base rate vs the average spin bowler to RHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Angle & variations: Uses round the wicket to both (LHB 73% · RHB 96%)

Stock Ball & Ball Types (vs right-handers) [▶ watch stock balls](#)

Stock ball — full on the stumps (38% of deliveries, economy 1.93). Minor variations: full in the channel (18%) and full outside off (17%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full on the stumps ▶	—	38%	1.93	3	17%
full in the channel ▶	—	18%	3.21	1	10%
full outside off ▶	—	17%	3.38	0	19%
a good length outside off ▶	—	10%	3.55	1	7%
a good length in the channel ▶	—	5%	1.64	1	20%
a good length on the stumps ▶	—	4%	4.00	0	35%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 209 balls · 2 wkts · econ 3.19

Top ball type	%	Econ	Wkts
full on the stumps	41%	2.26	0
full in the channel	20%	4.39	0
full outside off	19%	3.23	0
a good length outside off	8%	5.25	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 272 balls · 6 wkts · econ 2.43

Top ball type	%	Econ	Wkts
full on the stumps	37%	1.65	3
full in the channel	16%	2.09	1
full outside off	15%	3.51	0
a good length outside off	12%	2.73	0

Danger Zones (vs right-handers)

WICKETS — WHERE MOST CAME FROM
Full on the stumps
25% of mapped wickets (2 of 8)

DANGER LINE
Stumps
3 wkts / 207 balls · 1.5% adj (1.4% raw) · low sample

DANGER LENGTH
Full
5 wkts / 353 balls · 1.5% adj (1.4% raw)

RUNS — WHERE MOST CONCEDED
Full on the stumps
26% of runs (58 of 222)

Most threatening pitching full on the stumps (5 wkts, 1.5% strike). Most wickets come from full on the stumps, while he leaks the most runs full on the stumps.

Match-ups (vs right-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	203	2	51.0	3.01	101.5	13%	4.07 m
Old ball (31+ ov)	272	6	18.3	2.43	45.3	20%	4.13 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs right-handers)

53% of his runs come in boundaries — a boundary every 18 balls; the drive hurts most (10 fours/sixes at 2.0 runs/ball).

BOUNDARY %
53%
runs in 4s/6s

ROTATED %
47%
runs in 1s & 2s

BALLS / BOUNDARY
18

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	44	90	42%	10	2.05
Work/Nudge	37	56	26%	5	1.51
Sweep	13	32	15%	6	2.46
Cut	17	32	15%	4	1.88

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (119/119) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it full on the stumps most often (35%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full on the stumps, but strikes most often pitching on the stumps.

Speed & Spells

He is quicker in the 2nd innings.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs right-handers)

Almost exclusively round the wicket to right-handers (97%, 466 balls); the over the wicket sample (15 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	15 (3%)	Down leg	—	—	2.00	1	80%
Round	466 (97%)	Stumps	4.1 m	0%	2.78	7	53%

Over the Wicket

Over the wicket — only 15 balls to right-handers, too few to read into.

Round the Wicket

Where he pitches it from round the wicket (466 balls).

Sequencing & Over Construction

Relentlessly consistent — repeats his length ball after ball (length spread ± 1.0 m); holds a steady length right through the over.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.2 m	0%	3.37	0.0%
Ball 2	4.2 m	0%	2.70	0.0%
Ball 3	4.0 m	0%	2.29	4.8%
Ball 4	4.1 m	0%	3.18	1.2%
Ball 5	4.1 m	0%	2.48	2.5%
Ball 6	4.2 m	0%	2.58	1.3%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥ 3 wkts to qualify).
