Bowling Fingerprint (percentile vs ODI peers)

Changing (last 3 years vs career): repeatability down.

Blue solid line = career, dotted = last 3 years. Percentile within same-type ODI peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Crease variation = how much they shift their release point sideways across the crease ball to ball (high = varies a lot, low = same spot every ball). Repeatability = length consistency over their stock-length band, so deliberate yorkers/bouncers don't count as poor control (high = tighter, more metronomic than peers). A marker at the very edge = beyond the typical peer range on that trait.

Phase Profile (where they bowl & how they go there) ► wickets

Bjorn bowls most in the middle (82% of their overs) and goes at 5.60 at the death vs 4.17 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %
Powerplay	15%	23.0	4.17 P74	2 P24	48.0	69.0	7%	63%
Middle	82%	123.5	5.14 P41	20 P79	31.8	37.0	8%	50%
Death	3%	5.0	5.6 P78	1 P33	28.0	30.0	7%	40%

Blue P## = percentile vs modern-era ODI spin peers in that phase (two-new-balls era, 2011+; economy inverted so higher = harder to score off, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs LHB	238	15%	5.52	8	27.4	29.8	10%
· over the wkt	203		5.59	6	31.5	33.8	10%
· round the wkt	35		5.14	2	15.0	17.5	9%
vs RHB	671	94%	4.83	15	36.0	44.7	7%
· over the wkt	42		6.29	1	44.0	42.0	7%
· round the wkt	629		4.73	14	35.4	44.9	7%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

Off pace (slower balls)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations.

ODI internationals only. Ball-change eras in this sample: two new balls (2011-Jul25) 72%; two→one from ov35 (Jul25+) 28%. Phase = Powerplay 1–10 / Middle 11–40 / Death 41–50. Economy charges wides + no-balls to the bowler. odi-1.2 · 19 Sep 2026.
