Bowling Fingerprint (percentile vs ODI peers)

Solid line = career, **dotted** = last 3 years. Percentile within same-type ODI peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. **Crease variation** = how much they shift their release point sideways across the crease ball to ball (high = varies a lot, low = same spot every ball). **Repeatability** = length consistency over their stock-length band, so deliberate yorkers/bouncers don't count as poor control (high = tighter, more metronomic than peers). A marker at the very edge = beyond the typical peer range on that trait.

Phase Profile (where they bowl & how they go there) [▶ wickets](#)

Keshav bowls most in the **middle** (89% of their overs) and goes at **6.68** at the death vs 4.03 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %
Powerplay	7%	35.0	4.03 P83	5 P48	28.2	42.0	8%	60%
Middle	89%	426.8	4.7 P68	65 P74	30.8	39.4	7%	50%
Death	4%	19.0	6.68 P24	3 P15	42.3	38.0	11%	37%

Blue P## = percentile vs modern-era ODI spin peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs LHB	805	30%	4.85	20	32.5	40.2	7%
· over the wkt	565		4.91	17	27.2	33.2	8%
· round the wkt	240		4.72	3	63.0	80.0	6%
vs RHB	2080	99%	4.68	53	30.6	39.2	7%
· round the wkt	2059		4.71	52	31.1	39.6	7%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

Off pace (slower balls)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations.
