Scouting Summary

COMMON THEMES

- Left Fast, averaging 129.5 kph (up to 138.4).
- Usually takes the new ball (opens in 52% of innings).
- Typical length is **7-8m** (their good length); median 7.1 m.
- Stock ball is **a good length outside off, swinging both ways, seaming away, passing outside off** (34% of deliveries).
- Goes round the wicket 0% of the time against left-handers.
- Across an over he **holds a fairly consistent length**, banging it in more as the over goes on.

BIGGEST THREATS

- Most dangerous length is **Good Length** (7 wkts, 1.2% adjusted strike).
- Danger pitching line: **6th stump**.
- Takes 18% of wickets pitching **a good length on the 5th stump**.
- Beats the bat 6.4% of tracked balls (false-shot 11.9%).
- Gets you **caught behind** more than most — 91% of his wickets (1.3× the typical rate for this type).
- 90% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 3rd, gully.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (21% of runs).
- Short ball: 28% of deliveries, economy 4.5 — 2 wkts from 239 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (38%) — his main scoring release.
- Cash in when he goes **full outside off** (economy 4.8, beats the bat only 9%).

Bowling Fingerprint

Changing (last 3 years vs career): swing up; repeatability down; crease width down.

Solid line = career, dotted = last 3 years (where enough recent balls). Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 38 last 5 vs 36 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index	Catches to: Keeper 7 Slip: 3rd 1 Gully 1 Fine leg: regulation 1 Angle & variations: Round the wicket to RHB (40%), stays over to LHB · slower balls 1.7% (~119 kph)
Caught	91%	68%	1.34×	
<i>Share of his 11 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). Index >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.</i>				

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off, swinging both ways, seaming away, passing outside off (34% of deliveries, economy 1.24). Minor variations: a good length wide outside off (25%) and full outside off (13%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	swinging both ways, seaming away	34%	1.24	4	13%
a good length wide outside off ▶	swinging both ways, seaming both ways	25%	2.67	2	13%
full outside off ▶	swinging both ways, seaming away	13%	4.76	3	9%
a good length in the channel ▶	seaming away, swinging in	6%	2.75	1	19%
back of a length outside off ▶	seaming both ways	4%	5.19	1	14%
back of a length wide outside off ▶	seaming both ways, swinging	4%	7.95	0	8%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 482 balls · 7 wkts · econ 2.84

Top ball type	%	Econ	Wkts
a good length outside off	36%	1.22	3
a good length wide outside off	23%	2.12	1
full outside off	13%	5.17	1
a good length in the channel	7%	2.40	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 381 balls · 4 wkts · econ 3.51

Top ball type	%	Econ	Wkts
a good length outside off	31%	1.27	1
a good length wide outside off	26%	3.31	1
full outside off	12%	4.17	2
back of a length outside off	7%	6.48	0

Danger Zones (vs left-handers)

WICKETS — WHERE MOST CAME FROM
A good length on the 5th stump
18% of mapped wickets (2 of 11)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
21% of runs (94 of 447)

DANGER LINE
6th stump
5 wkts / 252 balls · 1.8% adj (2.0% raw)

DANGER LENGTH
Good Length
7 wkts / 563 balls · 1.2% adj (1.2% raw)

Most threatening pitching a good length on the 6th stump (7 wkts, 1.2% strike). Most wickets come from a good length on the 5th stump, while he leaks the most runs a good length wide outside off.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	482	7	32.6	2.84	68.9	12%	7.11 m
Old ball (31+ ov)	381	4	55.8	3.51	95.2	12%	7.18 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	601	8	36.2	2.90	75.1	12%	7.15 m
Middle (4–7)	195	3	41.7	3.85	65.0	12%	7.22 m

Bangs it in more with the old ball (3%→11% short); more short balls at the tail (12% vs 5% to the top 3); more yorkers/full at the tail (39%).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

52% of his runs come in boundaries — a boundary every 15 balls; most runs go to the leg side (38%); the drive hurts most (21 fours/sixes at 2.7 runs/ball).

BOUNDARY %

Drive	53	142	33%	21	2.68
Pull/Hook	27	68	16%	12	2.52
Cut	15	40	9%	7	2.67

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (209/209) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around 6th stump and moves it back.

Runs come mostly on the off side (57%).

Where They Pitch It

Pitches it a good length wide outside off most often (24%); mixes in the short ball (27%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 5th stump, but strikes most often pitching on the 6th stump.

Speed & Spells

He is ~3.5 km/h quicker in later spells, is quicker in the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively over the wicket to left-handers (100%, 860 balls); the round the wicket sample (3 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	860 (100%)	Wide of 6th	7.1 m	7%	3.14	11	52%
Round	3 (0%)	Wide of 6th	—	—	2.00	0	0%

Over the Wicket

Where he pitches it from over the wicket (860 balls).

Round the Wicket

Round the wicket — only 3 balls to left-handers, too few to read into.

Sequencing & Over Construction

Moderately consistent with his length (length spread ±2.2 m; more repeatable than 54% of pace bowlers); tends to bang it in later in the over (short 4%→10% by the 5th–6th ball); and holds the same crease position through the over.

Across 19 dismissals, the wicket ball lands about 28 cm shorter than the ball before it — that’s the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.0 m	2%	2.70	2.2%
Ball 2	7.1 m	7%	3.02	1.5%
Ball 3	7.2 m	5%	2.92	0.7%
Ball 4	7.2 m	8%	3.35	0.7%
Ball 5	7.4 m	9%	3.22	0.7%
Ball 6	7.1 m	10%	3.61	2.1%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 76% of left-arm pace); releases about 54 cm from the middle stump; varies his spot on the crease a lot (more than 80% of left-arm pace). Comes wider round the wicket (54 cm over vs 89 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	7%	125	3.07	1	64.0	125
Standard (45–75)	66%	1,244	3.01	19	32.9	65
Wide (>75cm)	27%	506	3.27	7	39.4	72

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	78%	9%	85%	7%
Round the wicket	22%	0%	1%	99%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce.

Generates about average seam and about average swing for a pace bowler; seams it away more to left-hand batters (65%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=253) 49% away / 51% in; old ball (≥40 ov, n=174) 29% away / 71% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.80°	47th pct (about average)	38% away / 62% in
Seam	0.55°	42nd pct (about average)	65% away / 35% in
Bounce	4.3°	81st pct (well above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (30% of play-and-misses). Overall he beats the bat 6.4% of tracked balls (false-shot 11.9%, n=863).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
