Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other RHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Xavier Bartlett	Right pace	24.7	79.7	56.4	good length, 4th-stump channel	Caught behind 26.1%	High
Josh Hazlewood	Right pace	29.6	75.9	47.4	good length, 4th-stump channel	Caught behind 26.0%	High
Adam Zampa	Leg-spin	32.3	91.6	55.8	good length, outside off	LBW 21.5%	Cohort
Spencer Johnson	Left pace	35.4	82.3	46.0	short, 4th-stump channel	Caught behind 27.5%	Low
Nathan Ellis	Right pace	36.8	88.2	46.1	short, 4th-stump channel	Caught behind 27.2%	High

Structurally, leg-spin turning the ball away from the RHB is the matchup class that persists — favour that angle when the individual reads are thin.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the left.
