v Bangladesh · 1 Test · 108 balls · 77 runs

They stayed over the wicket, banged it in short in the channel. Not dismissed in the series.

Ball	Them	Teammates	
A good length	77%	92%	▼ less
Short	11%	2%	▲ more
Cut ball (short, wide off)	11%	2%	▲ more

v South Africa · 2 Tests · 93 balls · 45 runs · avg 11.2

They pitched it up at their stumps. 4 dismissals — 2 LBW, 1 caught and 1 bowled, the wicket ball most often yorker length, at the stumps, playing the forward defence.

v England · 1 Test · 46 balls · 31 runs · avg 15.5

Too few balls in this series to compare a plan.

Only the balls of each attack's pace plan that differed from what the same bowlers gave that side's other RHB top-order batters. The full dismissal detail sits in the vision playlists.

Our Best Options (simulated matchups)

From the match simulation — a tool that plays each batter-v-bowler pairing out thousands of times from their full Test profiles. Low expected average = the bowler wins the matchup. "Cohort" confidence = they have not faced enough of that type for a personal read.

Bowler	Type	Exp avg	Exp SR	Out in first 30 %	Stock wicket ball	Top dismissal	Confidence
Xavier Bartlett	Right pace	16.6	74.8	65.7	good length, 4th-stump channel	Caught behind 26.6%	Med
Josh Hazlewood	Right pace	22.4	71.8	55.4	good length, 4th-stump channel	Caught behind 26.4%	Med
Nathan Ellis	Right pace	25.3	81.8	56.4	short, 4th-stump channel	Caught behind 27.7%	Med
Mitch Marsh	Right pace	28.6	86.0	53.8	good length, 4th-stump channel	Caught behind 25.8%	Med
Cameron Green	Right pace	29.5	86.2	53.0	short, 4th-stump channel	Caught behind 28.3%	Med

Structurally, leg-spin turning the ball away from the RHB is the matchup class that persists — favour that angle when the individual reads are thin.

Where They're Vulnerable (left-arm pace)

Per bucket: batting average, strike rate, false-shot %, dismissals per 100 balls, boundary %. Pink row = their lowest-average (softest) bucket in that dimension.

Suggested Fields (the stock field ± their evidenced deviations)

Each field starts from the **stock template** for that bowler type & phase (orthodox because it works), then makes at most **three** changes — each one earned by a trigger in **their** game clearing the cohort P75 bar (do they lap, cut, pull, score square, edge early?). **Change** rows are highlighted with their stat; **Stock** rows carry the orthodoxy line. The read line backtests the changes against the pure stock field. Early = first 30 balls; Set = once in. Drawn from behind the bowler (bowler bottom, striker top); off side is on the left.

Fielder	Stock/Change	Why they're there
1st slip	Stock	Standard stock position.
2nd slip	Stock	Standard stock position.
Gully	Stock	Standard stock position.
Backward point	Stock	Standard stock position.
Cover	Stock	Standard stock position.
Backward square leg	Change	He works 54% of his runs to leg (P93) — squarer leg-side saver.
Mid-on	Stock	Standard stock position.
Fine leg	Stock	Standard stock position.
Third man	Stock	Standard stock position.

Stock field + 1 change (highlighted).

Floating fielder: They score only 2% of their runs where mid-on stands — the spare run-saver to move as the game asks.

Bouncer plan

Fielder	Stock/Change	Why they're there
1st slip	Change	One slip kept for the top / outside edge.
Short leg	Change	Catcher in front of square for the fend or glove off the hip.
Gully	Change	The steer or fend that flies squarer of the wicket.
Point	Change	Ring saver for the bumper plan.
Cover	Change	Ring saver for the bumper plan.
Mid-off	Change	Ring saver for the bumper plan.
Mid-on	Change	Ring saver for the bumper plan.
Deep backward square	Change	Deep behind square for the top-edged pull.
Deep fine leg	Change	Deep behind square for the hook.

A standard bumper field — he isn't a heavy puller (P52), so this is a holding / surprise option, not a wicket-taking plan. One slip, a catcher in front of square, and the two legal leg-side riders (deep backward square + deep fine leg).
