Solid line = career, dotted = last 3 years. Percentile within same-type ODI peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. **Crease variation** = how much they shift their release point sideways across the crease ball to ball (high = varies a lot, low = same spot every ball). **Repeatability** = length consistency over their stock-length band, so deliberate yorkers/bouncers don't count as poor control (high = tighter, more metronomic than peers). A marker at the very edge = beyond the typical peer range on that trait.

Phase Profile (where they bowl & how they go there)

► wickets

Brad bowls most in the **middle** (64% of their overs) and goes at **9.38** at the death vs 4.44 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %	Avg speed
Powerplay	20%	25.0	4.44 P80	4 P67	27.8	37.5	13%	73%	128
Middle	64%	79.8	5.11 P61	11 P49	37.1	43.5	10%	55%	128
Death	16%	19.5	9.38 P8	4 P6	45.8	29.2	17%	25%	126

Blue P## = percentile vs modern-era ODI pace peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Length & Variation Deep-Dive (yorkers, bouncers & slower balls — how often, what line)

► slower balls

How often, by phase — % of that phase's legal balls

Phase	Yorker / full	Bouncer / short	Slower ball	Slower yorker	Slower bouncer	Econ
Powerplay	37%	1%	1%	0.0%	0.0%	4.44
Middle	52%	1%	3%	1.5%	0.0%	5.11
Death	74%	1%	15%	12.8%	0.0%	9.38
Overall	52%	1%	4%	2.9%	0.0%	5.65

Yorker line ►

Wide (the hole)	0%
Off / channel	0%
At the stumps	100%
Leg stump / straight	0%

Full balls only (391), by pitch line. Slower-ball yorkers 2.9% (22), mostly at the stumps.

Bouncer line ►

Too few bouncers to read (5).

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs LHB	214	36%	6.31	6	37.5	35.7	14%
· over the wkt	136		6.53	3	49.3	45.3	18%
· round the wkt	78		5.92	3	25.7	26.0	8%
vs RHB	532	0%	5.38	13	36.7	40.9	11%
· over the wkt	530		5.39	13	36.6	40.8	11%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Off pace (slower balls)

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations.

ODI internationals only. Ball-change eras in this sample: two new balls (2011-Jul25) 63%; two→one from ov35 (Jul25+) 37%. Phase = Powerplay 1–10 / Middle 11–40 / Death 41–50. Economy charges wides + no-balls to the bowler. odi-1.2 · 03 Sep 2026.
