Phase Profile (where they bowl & how they go there) [▶ wickets](#)

Newman bowls most in the **middle** (81% of their overs) and goes at **3.00** at the death vs 5.75 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %	Avg speed
Powerplay	12%	4.0	5.75 P21	0 P5	—	—	12%	71%	—
Middle	81%	26.0	5.58 P33	4 P62	36.2	39.0	8%	58%	—
Death	6%	2.0	3.0 P100	1 P98	6.0	12.0	0%	58%	—

Blue **P##** = percentile vs modern-era ODI pace peers in that phase (two-new-balls era, 2011+; economy inverted so **higher** = **harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Off pace (slower balls)

Too few tracked balls to map (18 in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations. **These maps and the speed cards also include this bowler's T20I deliveries** — their ODI record alone is too thin to read. Where the ball lands and how fast it is bowled carry across white-ball formats; the economy, average, wicket and phase numbers on this page are ODI only.
