Solid line = career, dotted = last 3 years. Percentile within same-type **ODI** peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. **Crease variation** = how much they shift their release point sideways across the crease ball to ball (high = varies a lot, low = same spot every ball). **Repeatability** = length consistency over their stock-length band, so deliberate yorkers/bouncers don't count as poor control (high = tighter, more metronomic than peers). A marker at the very edge = beyond the typical peer range on that trait.

Phase Profile (where they bowl & how they go there)

► wickets

Sean bowls most in the **middle** (84% of their overs) and goes at **6.17** at the death vs 5.83 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %
Powerplay	2%	6.0	5.83 P2	0 P2	—	—	8%	39%
Middle	84%	306.8	4.76 P63	31 P35	47.1	59.4	7%	54%
Death	14%	51.7	6.17 P54	11 P39	29.0	28.2	9%	45%

Blue **P###** = percentile vs modern-era ODI spin peers in that phase (two-new-balls era, 2011+; economy inverted so **higher = harder to score off**, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %

· round the wkt	1220		4.94	22	45.6	55.5	8%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).
