Bowling Fingerprint (percentile vs ODI peers)

Changing (last 3 years vs career): drift down; turn down; repeatability down.

Blue solid line = career, dotted = last 3 years. Percentile within same-type ODI peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Crease variation = how much they shift their release point sideways across the crease ball to ball (high = varies a lot, low = same spot every ball). Repeatability = length consistency over their stock-length band, so deliberate yorkers/bouncers don't count as poor control (high = tighter, more metronomic than peers). A marker at the very edge = beyond the typical peer range on that trait.

Phase Profile (where they bowl & how they go there) [▶ wickets](#)

Sikandar bowls most in the middle (81% of their overs) and goes at 5.97 at the death vs 5.06 in the powerplay.

Phase	% of overs	Overs	Economy	Wkts	Average	SR	Boundary %	Dot %
Powerplay	5%	31.0	5.06 P31	3 P24	52.3	62.0	9%	58%
Middle	81%	478.3	4.62 P73	38 P23	58.2	75.5	6%	52%
Death	13%	77.7	5.97 P61	19 P56	24.4	24.5	7%	37%

Blue P## = percentile vs modern-era ODI spin peers in that phase (two-new-balls era, 2011+; economy inverted so higher = harder to score off, wickets = strike threat; grey = bottom third). So a high death-economy percentile means cheap for the death, where everyone leaks.

Match-ups (each hand, split over vs round the wicket)

Batter	Balls	Round %	Economy	Wkts	Average	SR	Boundary %
vs LHB	1361	88%	4.72	26	41.2	52.3	6%
· over the wkt	160		5.1	3	45.3	53.3	8%
· round the wkt	1201		4.67	23	40.6	52.2	6%
vs RHB	2161	15%	4.89	34	51.8	63.6	7%
· over the wkt	1829		4.8	27	54.2	67.7	7%
· round the wkt	332		5.37	7	42.4	47.4	9%

Round % = share of their balls to that hand bowled from round the wicket. Sub-rows split each hand over vs round (shown when ≥30 balls).

Where They Bowl (pitch map + beehive · over vs round · stock vs slower)

On pace (stock speed)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

Off pace (slower balls)

Too few tracked balls to map (in total) — no over/round or pitch/stumps split shown.

The % on each pitch map is that slice's share of all legal balls (e.g. over the wicket, on pace). Off pace = slower-ball variations.

ODI internationals only. Ball-change eras in this sample: two new balls (2011-Jul25) 94%; two→one from ov35 (Jul25+) 6%. Phase = Powerplay 1–10 / Middle 11–40 / Death 41–50. Economy charges wides + no-balls to the bowler. odi-1.2 · 03 Sep 2026.
